A little about GoFr

GoFr is an Opinionated Web Framework written in Go (Golang). It was built with the aim to accelerate the process of building robust and scalable applications and is designed to offer a user-friendly experience for all the developers.

To know more about it visit : <https://gofr.dev>

Key Features

1. Out of the Box Observability
2. Authentication
3. Fine-Tuned Logging & On The Fly Log Level Management
4. Support for both REST and gRPC based APIs
5. Configuration management
6. Database Integrations and Migrations made effortless
7. Circuit Breaker for interservice calls

Lets Code

- Less Time to Production
- Easy to Debug
- Increases Developer Productivity

Thank You
