

# Micro Frontends - foundations

**TOMMY K**

Head of Frontend Department | Tech Lead |  
Podcaster | Speaker

# Agenda

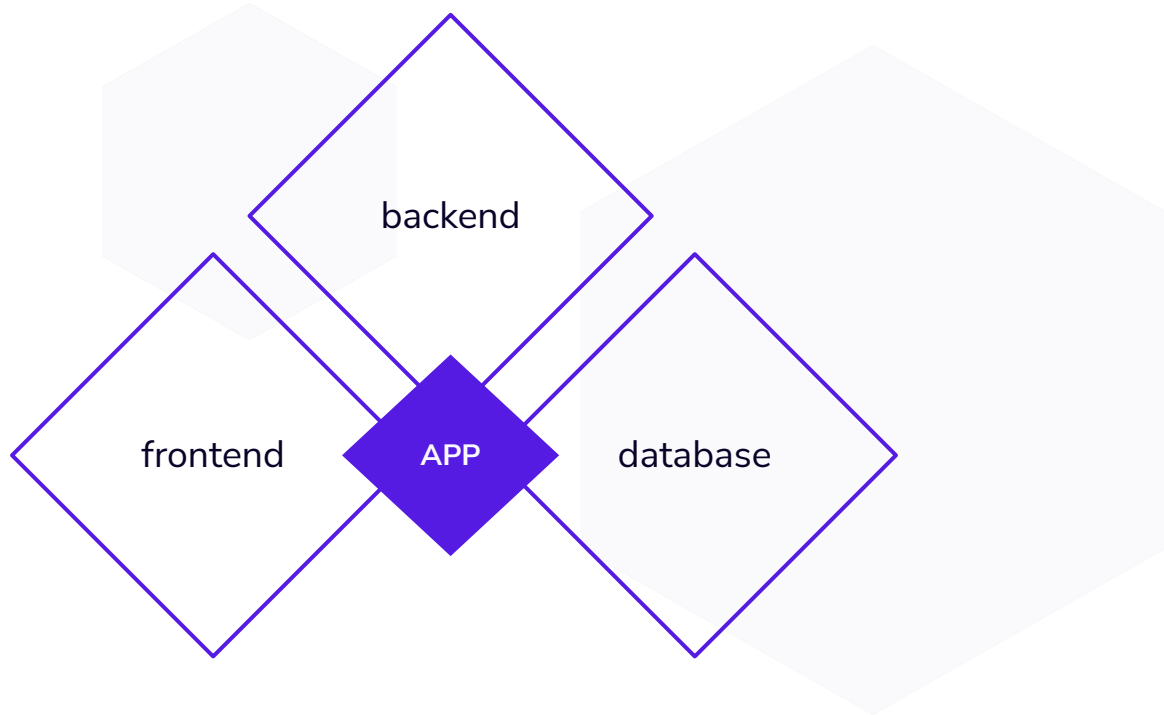

- 01** Software architecture
- 02** Monolith approach
- 03** Distributed approach
- 04** Micro Frontends
- 05** Why might we need that?
- 06** Summary

# 01 Software Architecture

The software architecture in short terms is about the whole system organization which includes: **components, relations between them, infrastructure and environment and set of rules and design patterns used to manage the system.**

## 02 Monolith approach

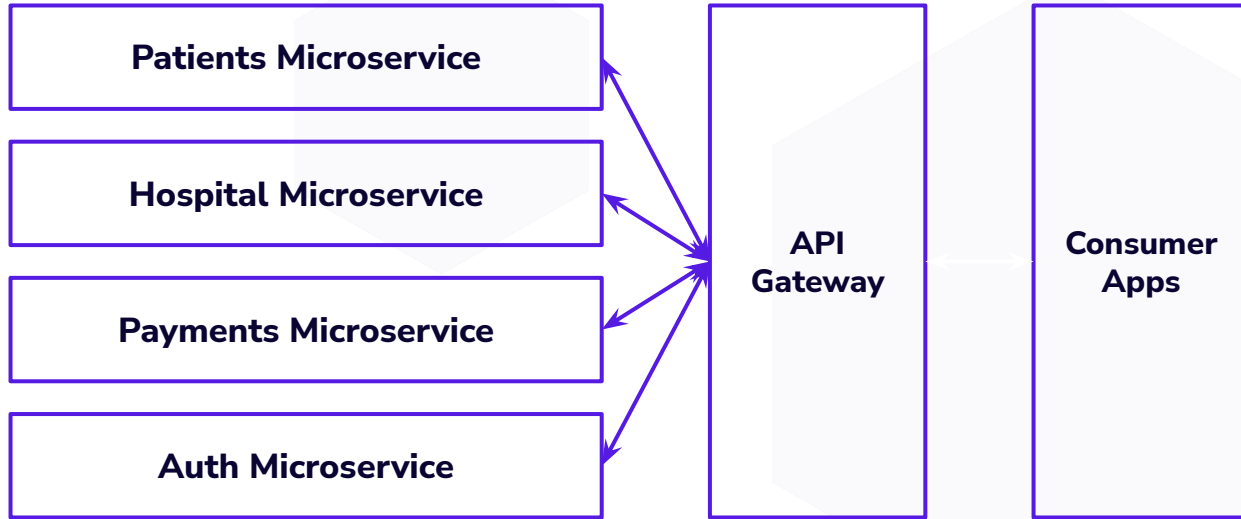

# 02 Monolith approach

## Pros and cons

- ◆ Encapsulate all problems and solution under single application
- ◆ On complexity growth it's hard to scale
- ◆ Security of data storing and communication
- ◆ Reduced palette of used technologies
- ◆ Lack of modularity
- ◆ Easy to start development

## 03 Distributed approach

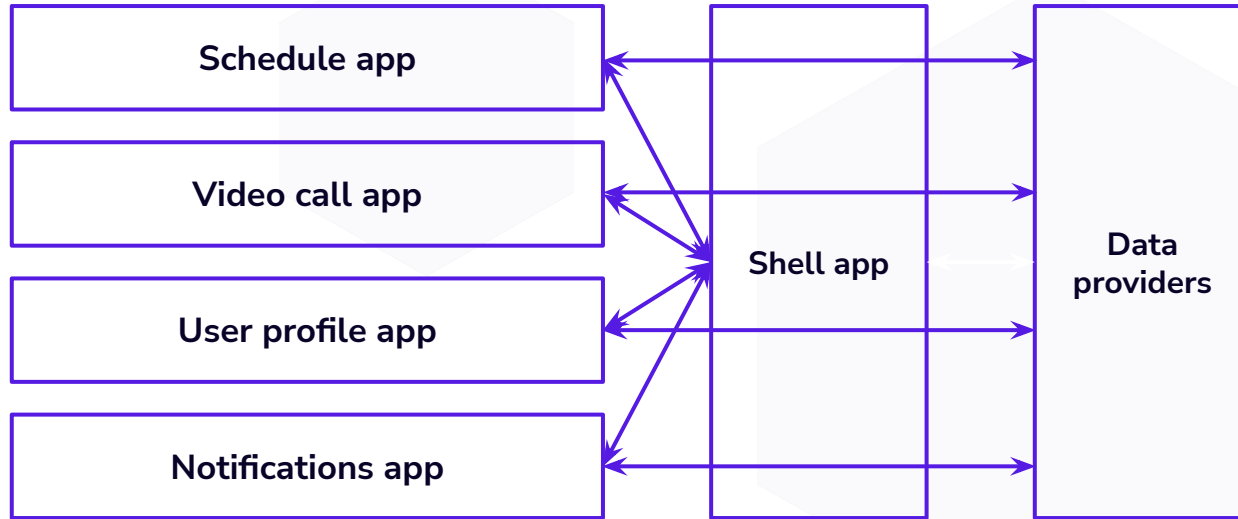

# 03 Distributed approach

## Pros and cons

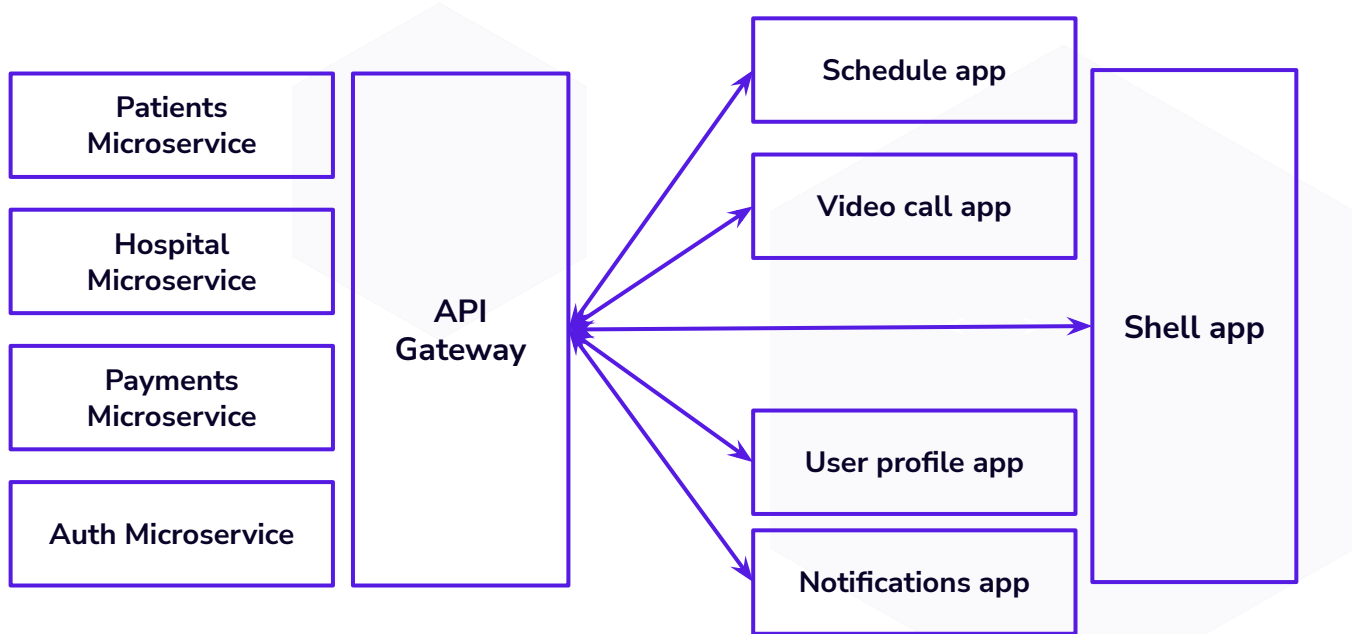

- ◆ High performance under big traffic and easy to scale.
- ◆ Increased response time depends on the number of the nodes to process the request.
- ◆ High complexity at the beginning of implementation.
- ◆ Wide palette of available technologies.
- ◆ Hard to debug and analyze.
- ◆ Hard to proof security for the whole system.

# 04 Micro Frontends

# 04 Micro Frontends

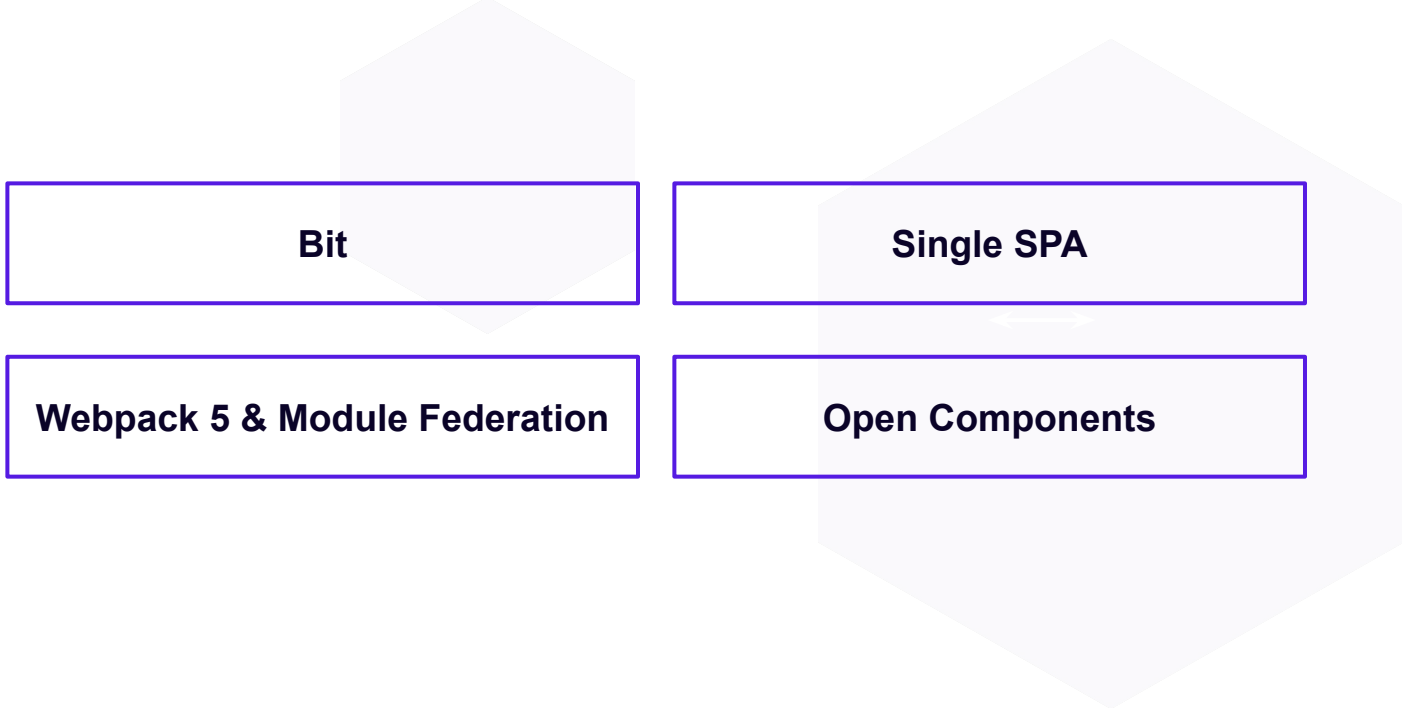

# 04 Micro Frontends

## Pros and cons

- ◆ Each module is a separate self contained app with own ecosystem.  
The key is to provide the good communication between apps.
- ◆ Modularization makes it easy to scale.
- ◆ Shell app is responsible for integrating all the apps.
- ◆ Each micro-frontend has own API integration.
- ◆ Independent development teams can collaborate on a frontend app easily.
- ◆ Performance optimization opportunities.

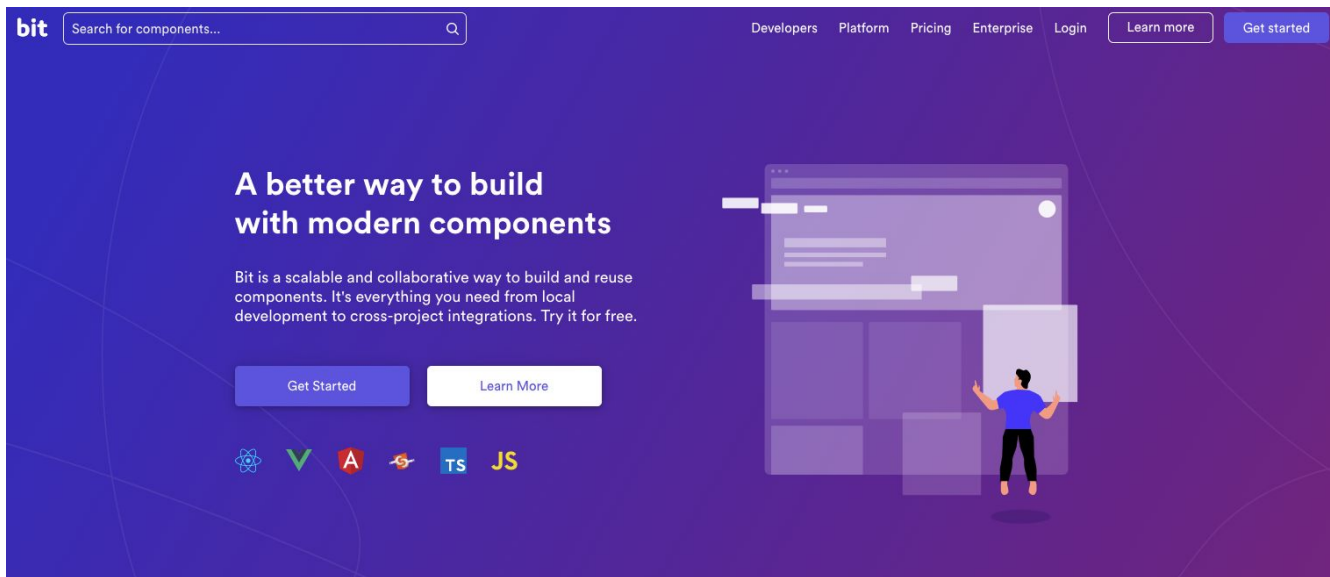

# 04 Micro Frontends

## Popular micro frontends framework

# 04 Micro Frontends

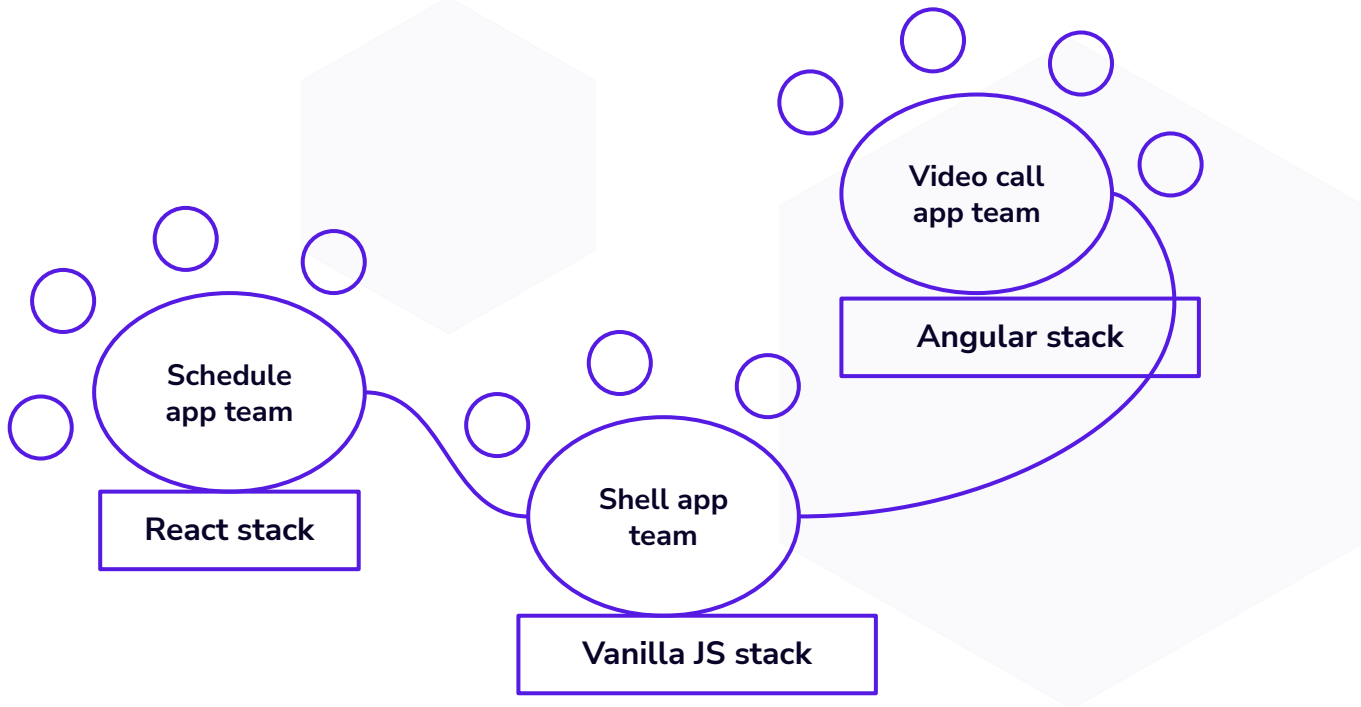

## BIT

React tutorial: <https://docs.bit.dev/docs/tutorials/bit-react-tutorial>

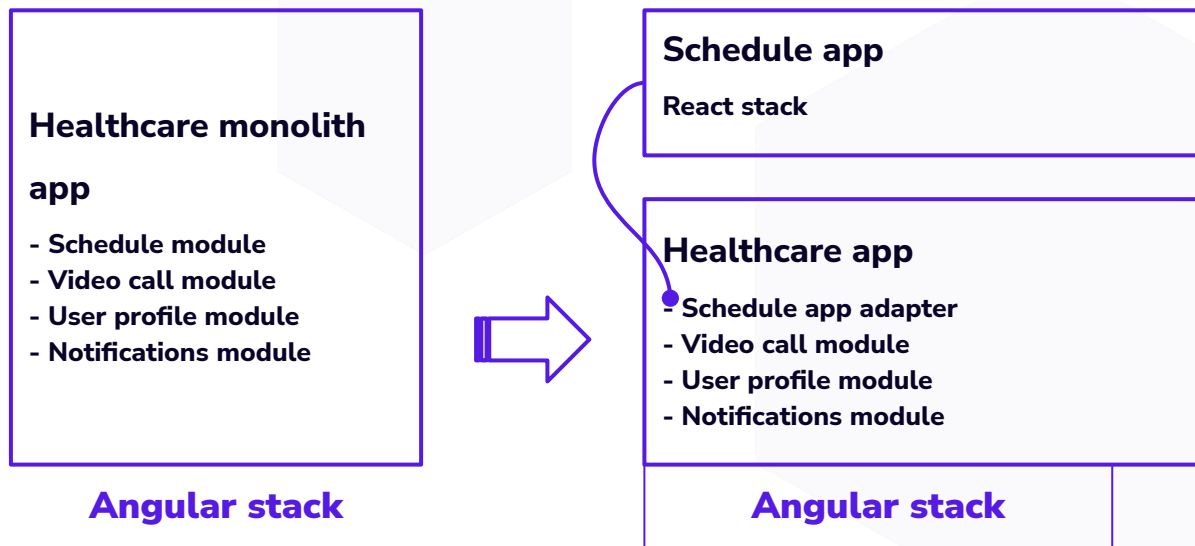

# 05 Why we might need that?

## Independent development teams

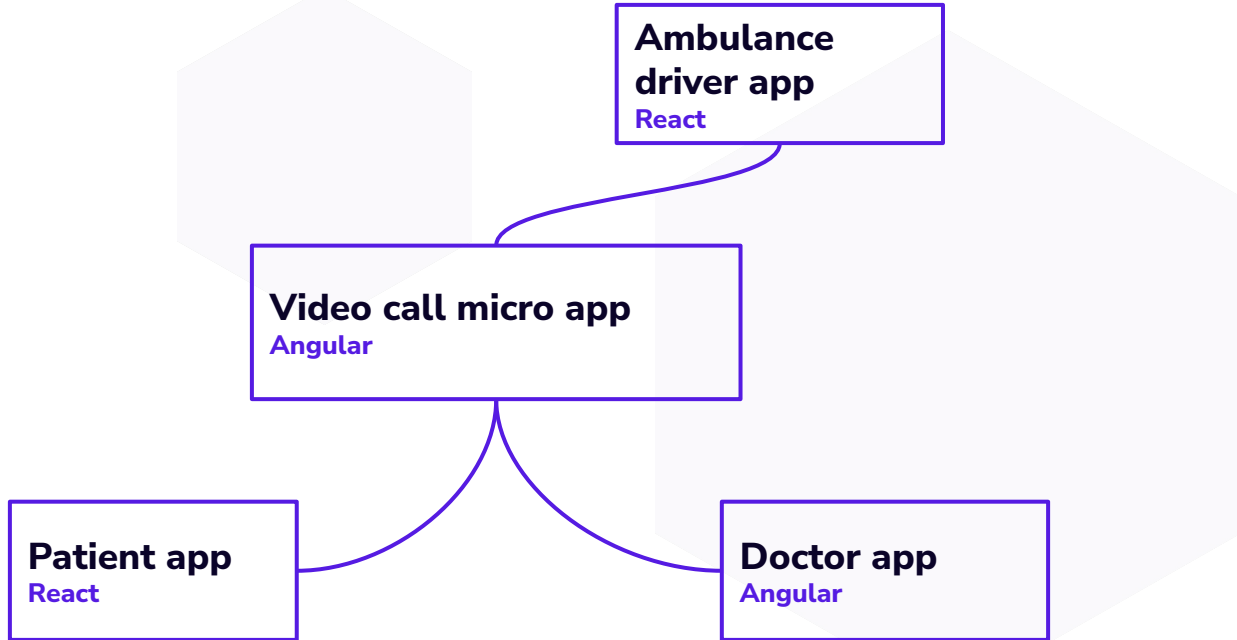

# 05 Why we might need that?

## Technology migration

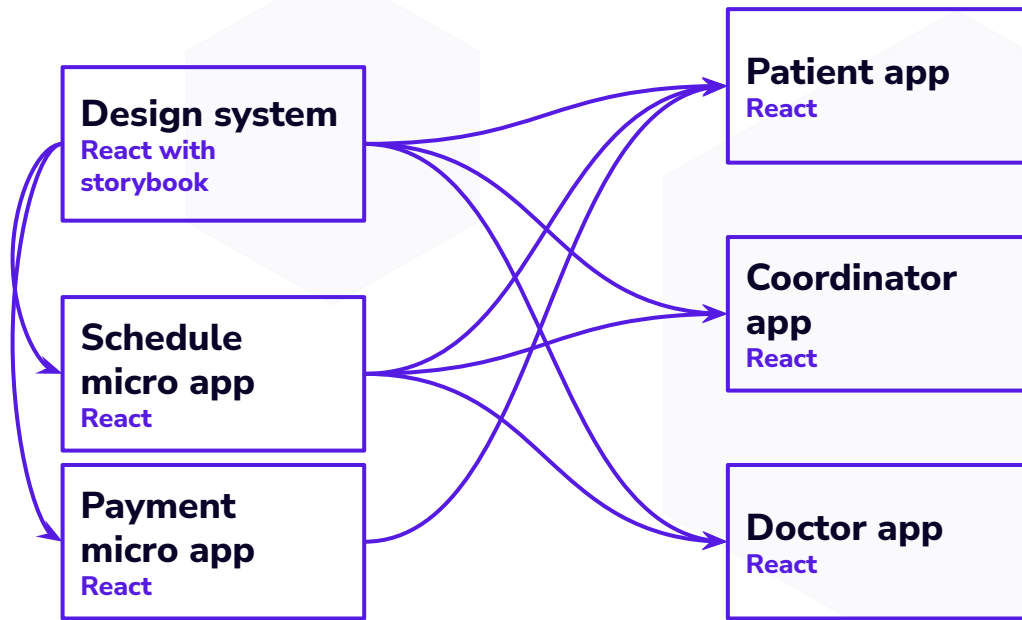

# 05 Why we might need that?

## Reusable micro apps

# 05 Why we might need that?

## Unified design system across platform

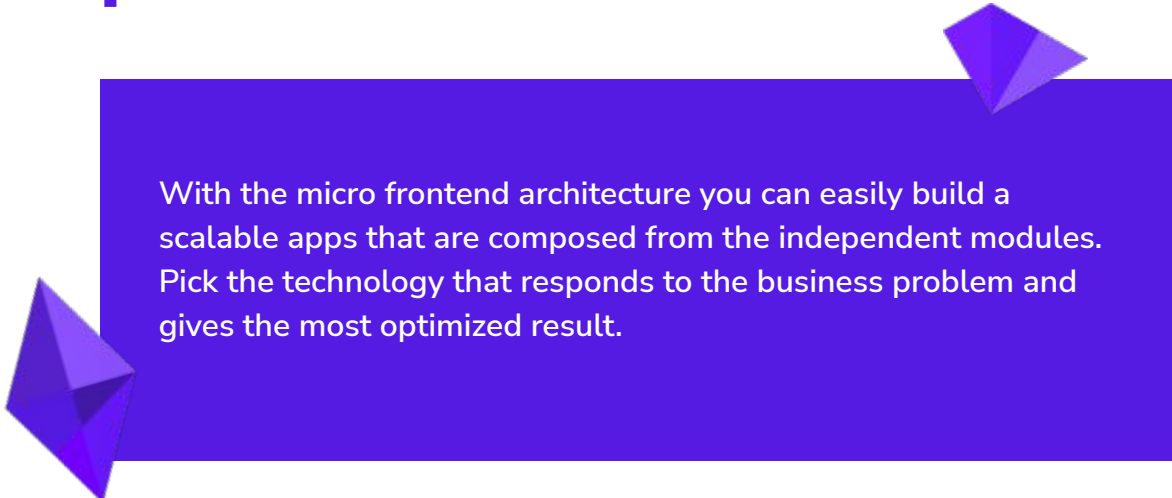

# 05 Why we might need that?

Why did They needed?

# Choose technology with surgical precision

With the micro frontend architecture you can easily build a scalable apps that are composed from the independent modules. Pick the technology that responds to the business problem and gives the most optimized result.

# Thank you!
