Automating ML Workflows?

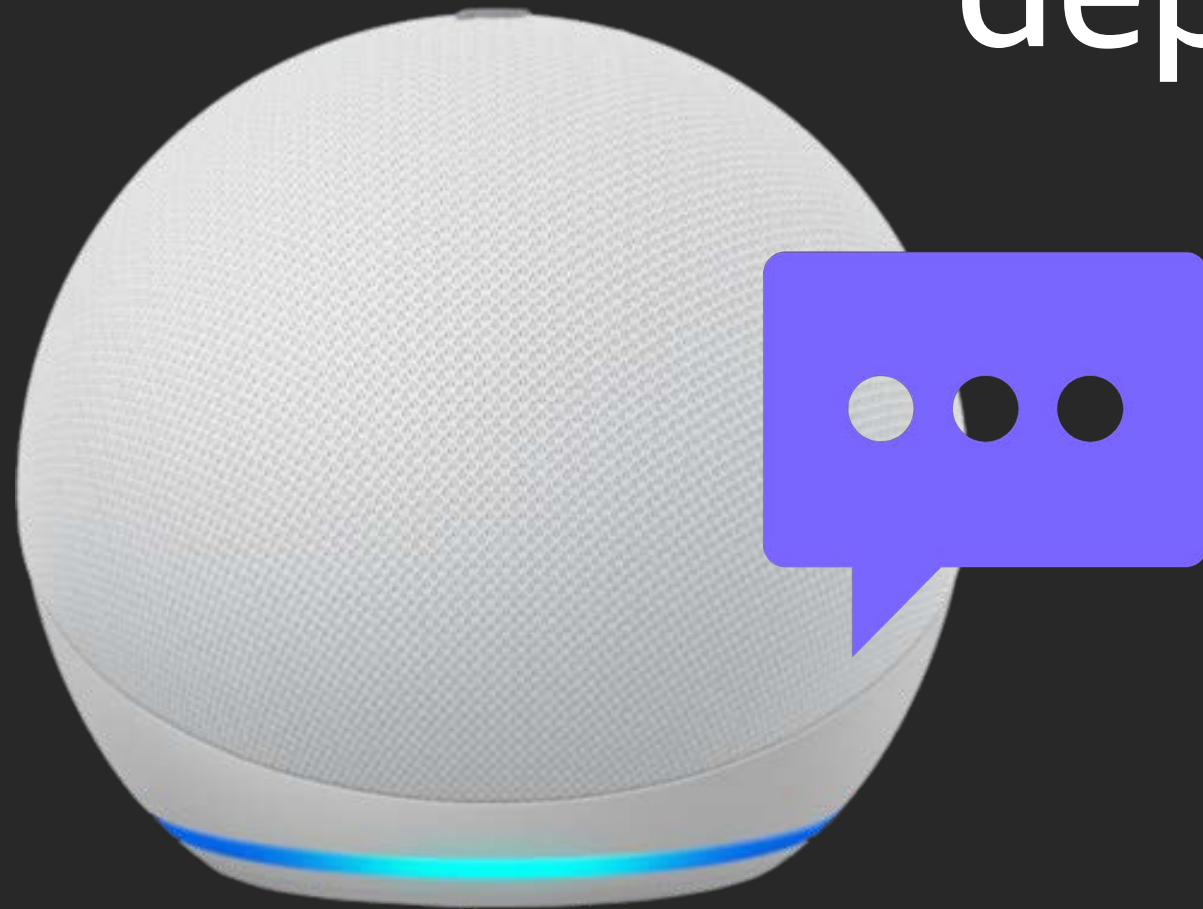

“ Alexa,
deploy my model! ”

“ Alexa,
deploy my model! ”

“ Which multi-armed bandit
strategy would you like to use?

Thompson Sampling, Epsilon
Greedy or Online Cover? ”

It's not just technology...

Get ML applications ready for production - MLOps

Considerations

Machine Learning Development Lifecycle (MLDC)
!= Software Development Lifecycle (SDLC)

ML model is only a small part of an overall solution

Multiple personas and teams involved

Integration with IT systems and practices

Operationalizing Machine Learning

Goals

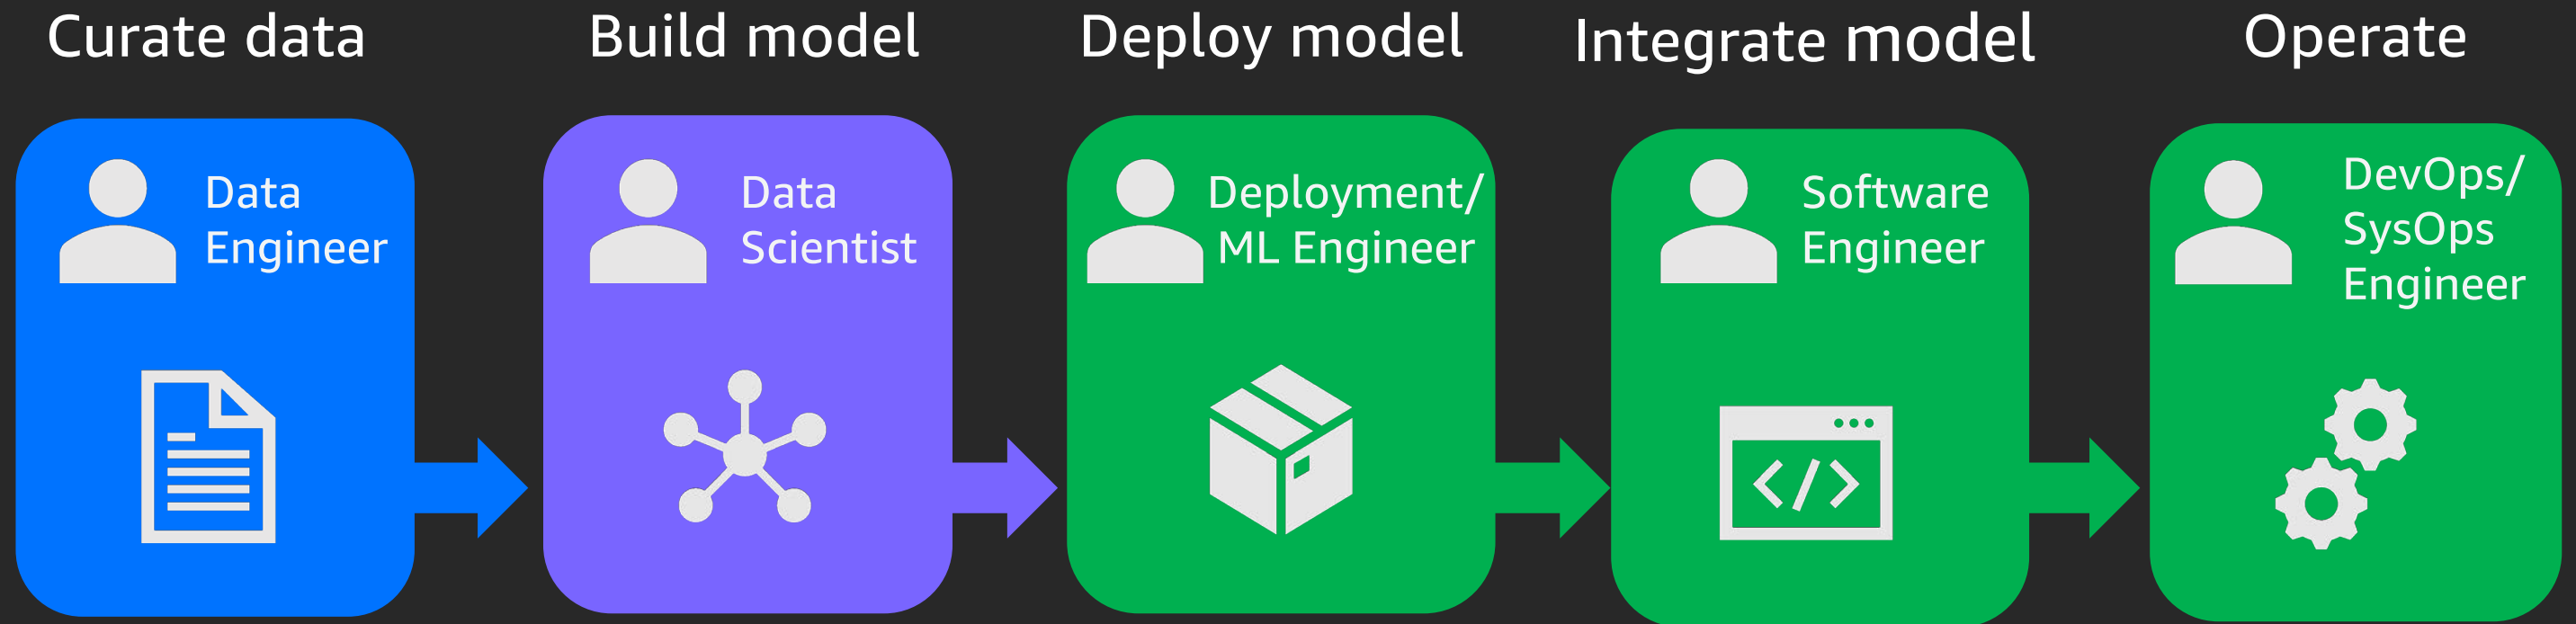

- Move away from manually building models { Status Quo }
- Accelerate the path to production { Phase 1 }
- Improve the quality of deployed models { Phase 2 }

Ultimately

- Build resilient, secure, performant, operationally efficient and cost optimized AI/ML solutions

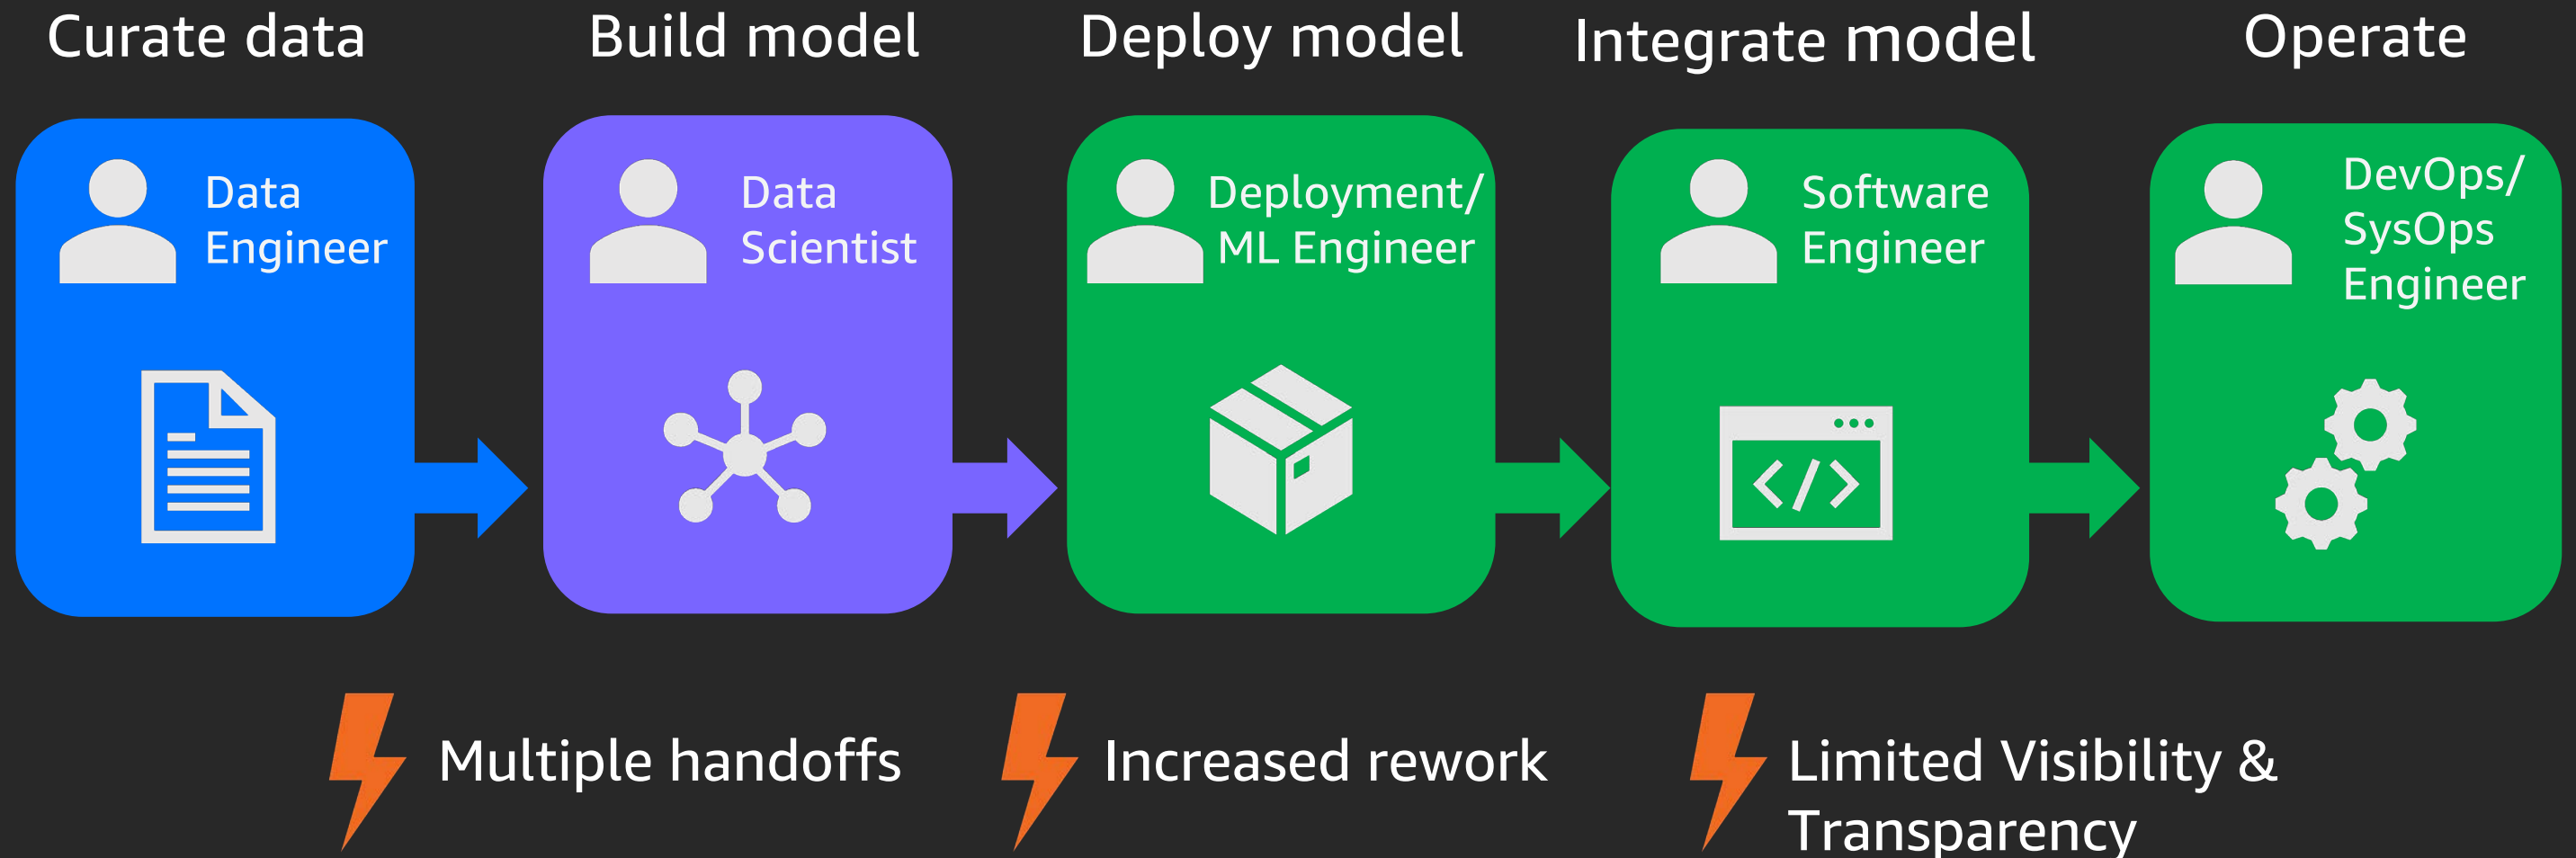

Status Quo:

Manually build models, individually executed steps

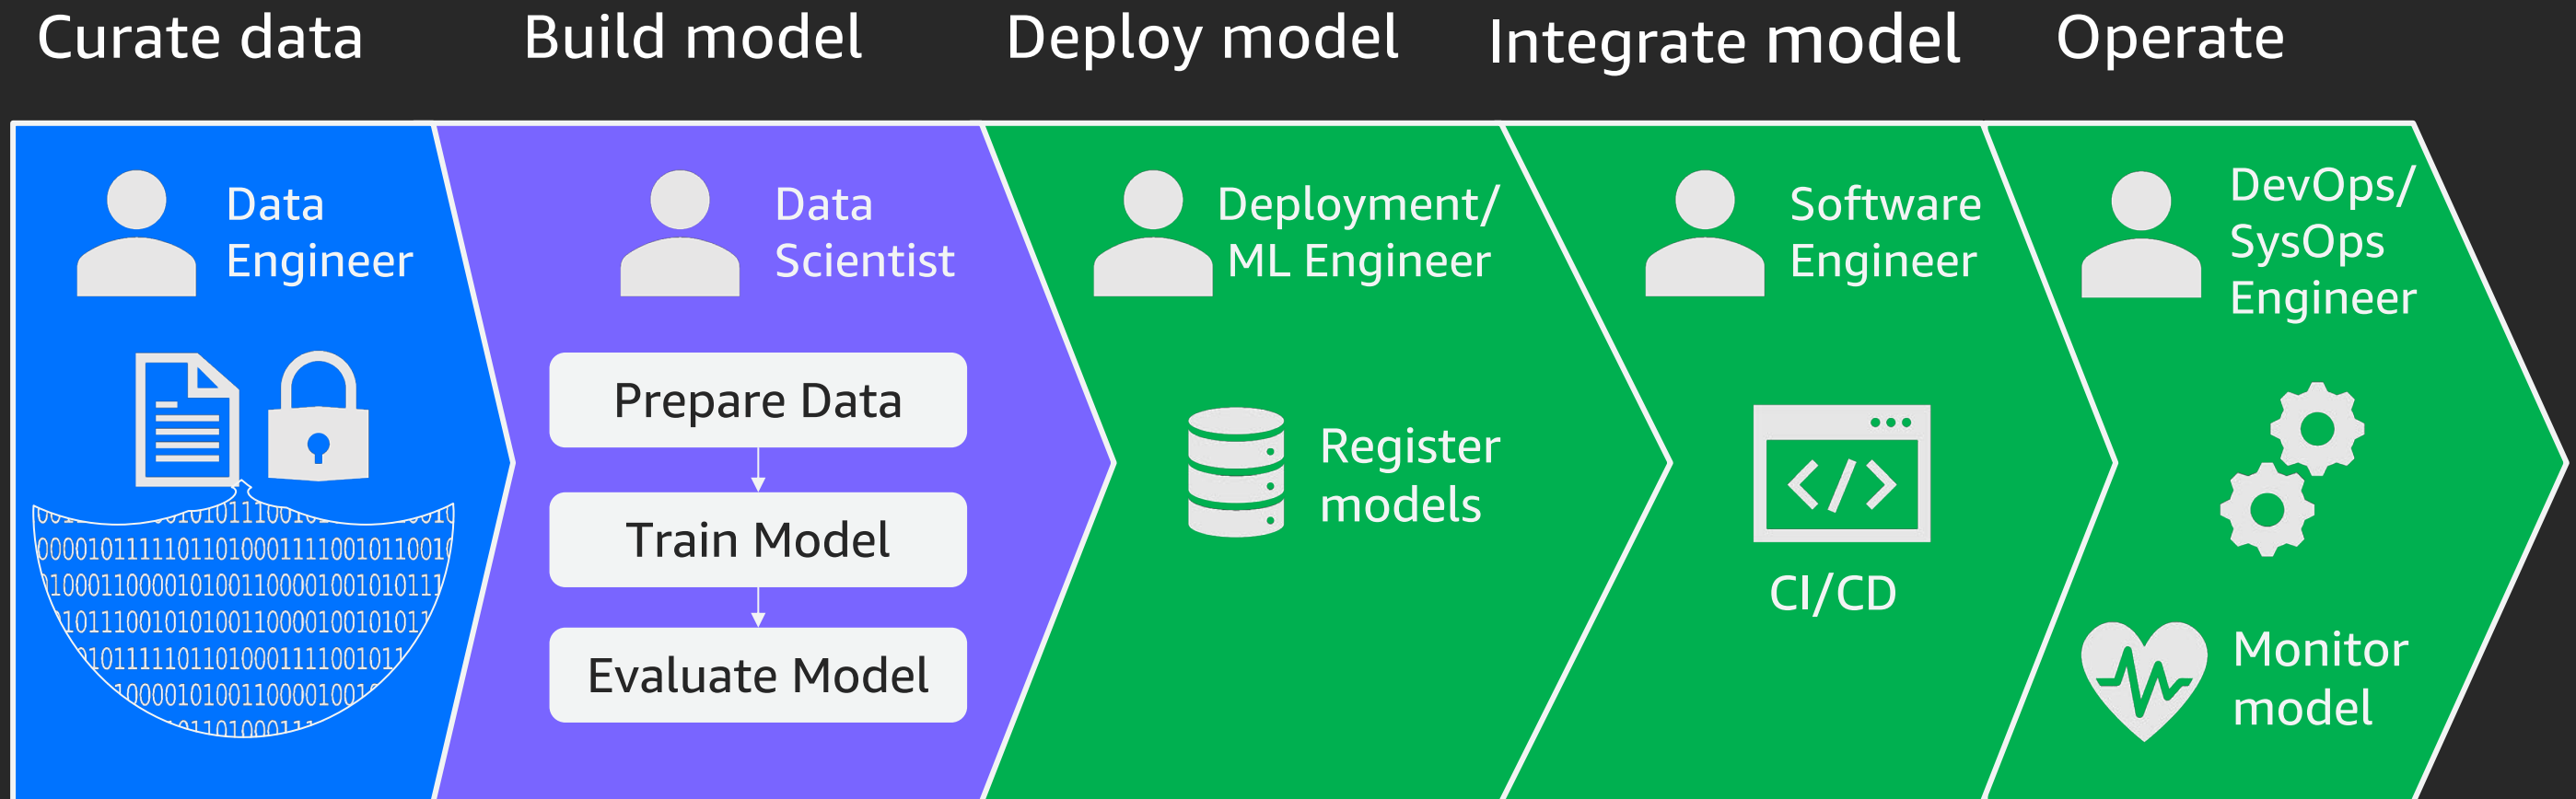

Status Quo:

Manually build models, individually executed steps

Phase 1: Orchestrate steps as pipelines and automate tasks within each step

Phase 1: Orchestrate steps as pipelines and automate tasks within each step

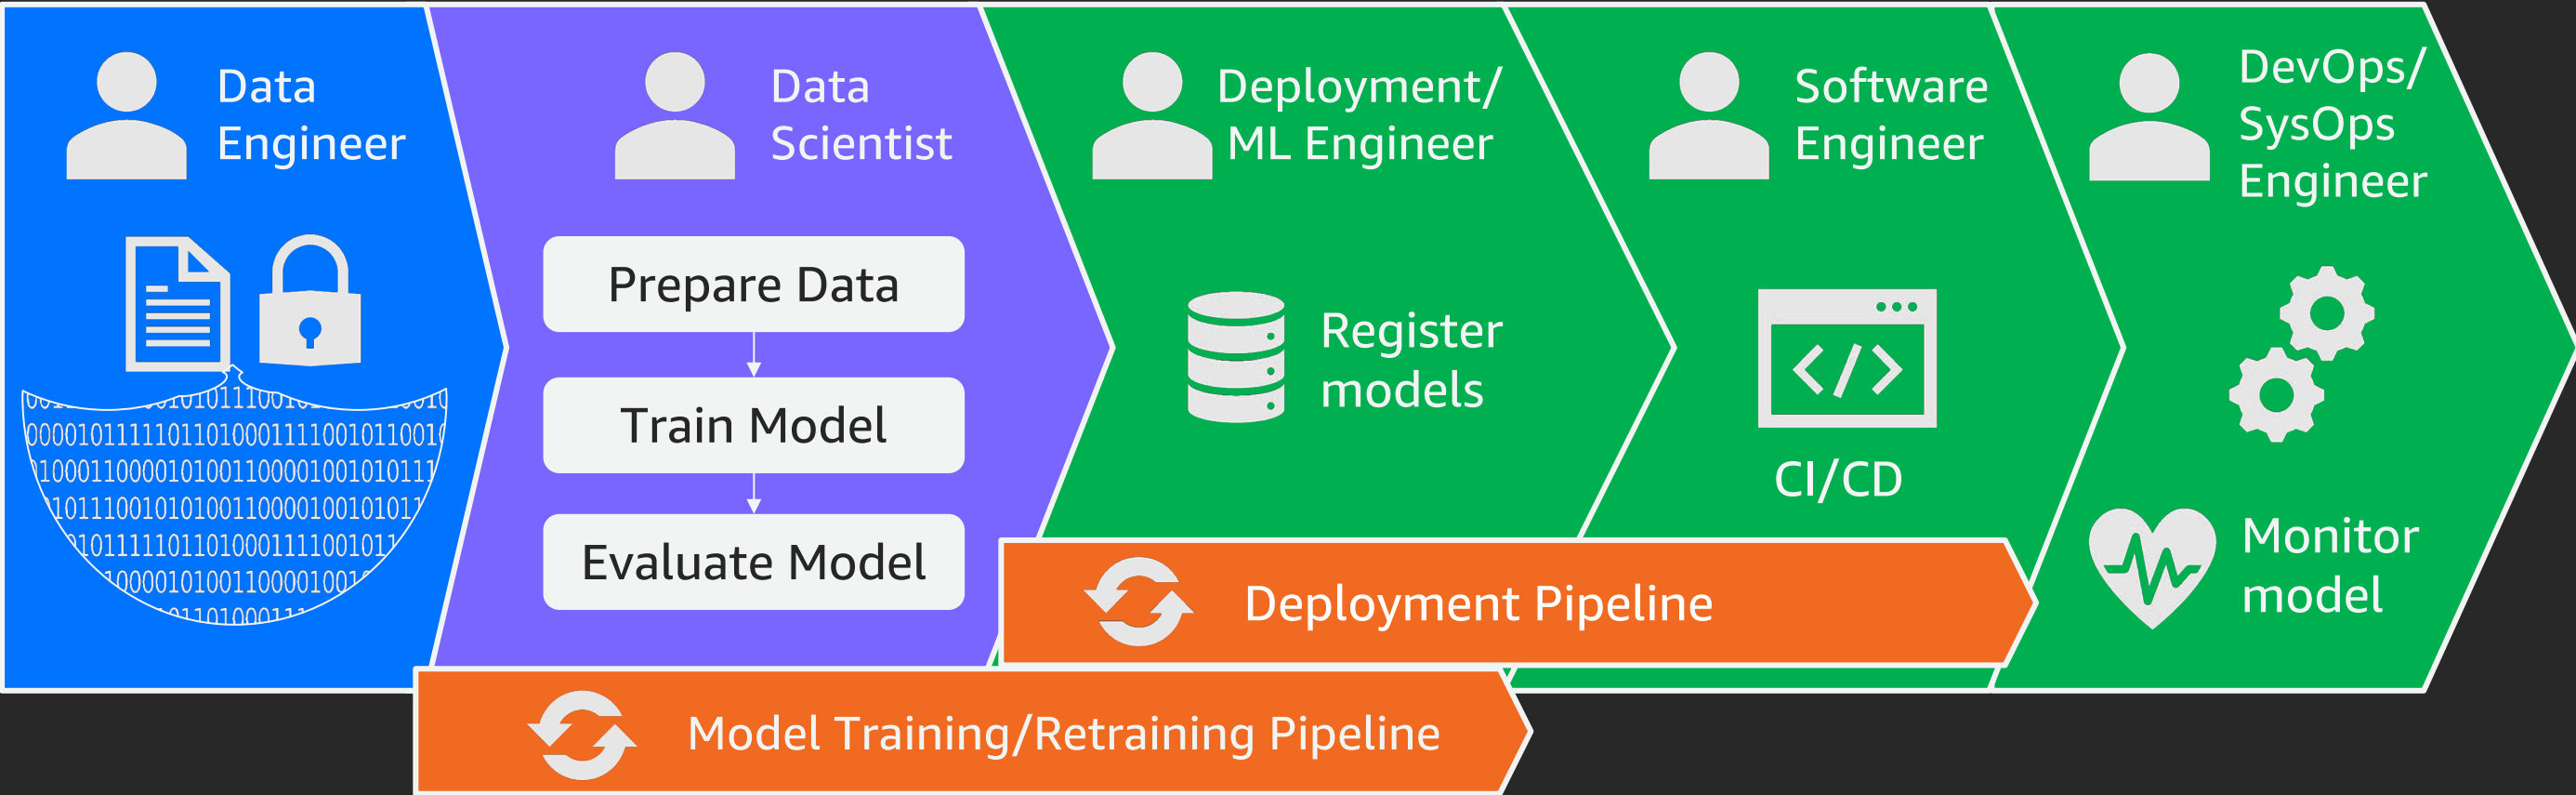

Curate data

Build model

Deploy model

Integrate model

Operate

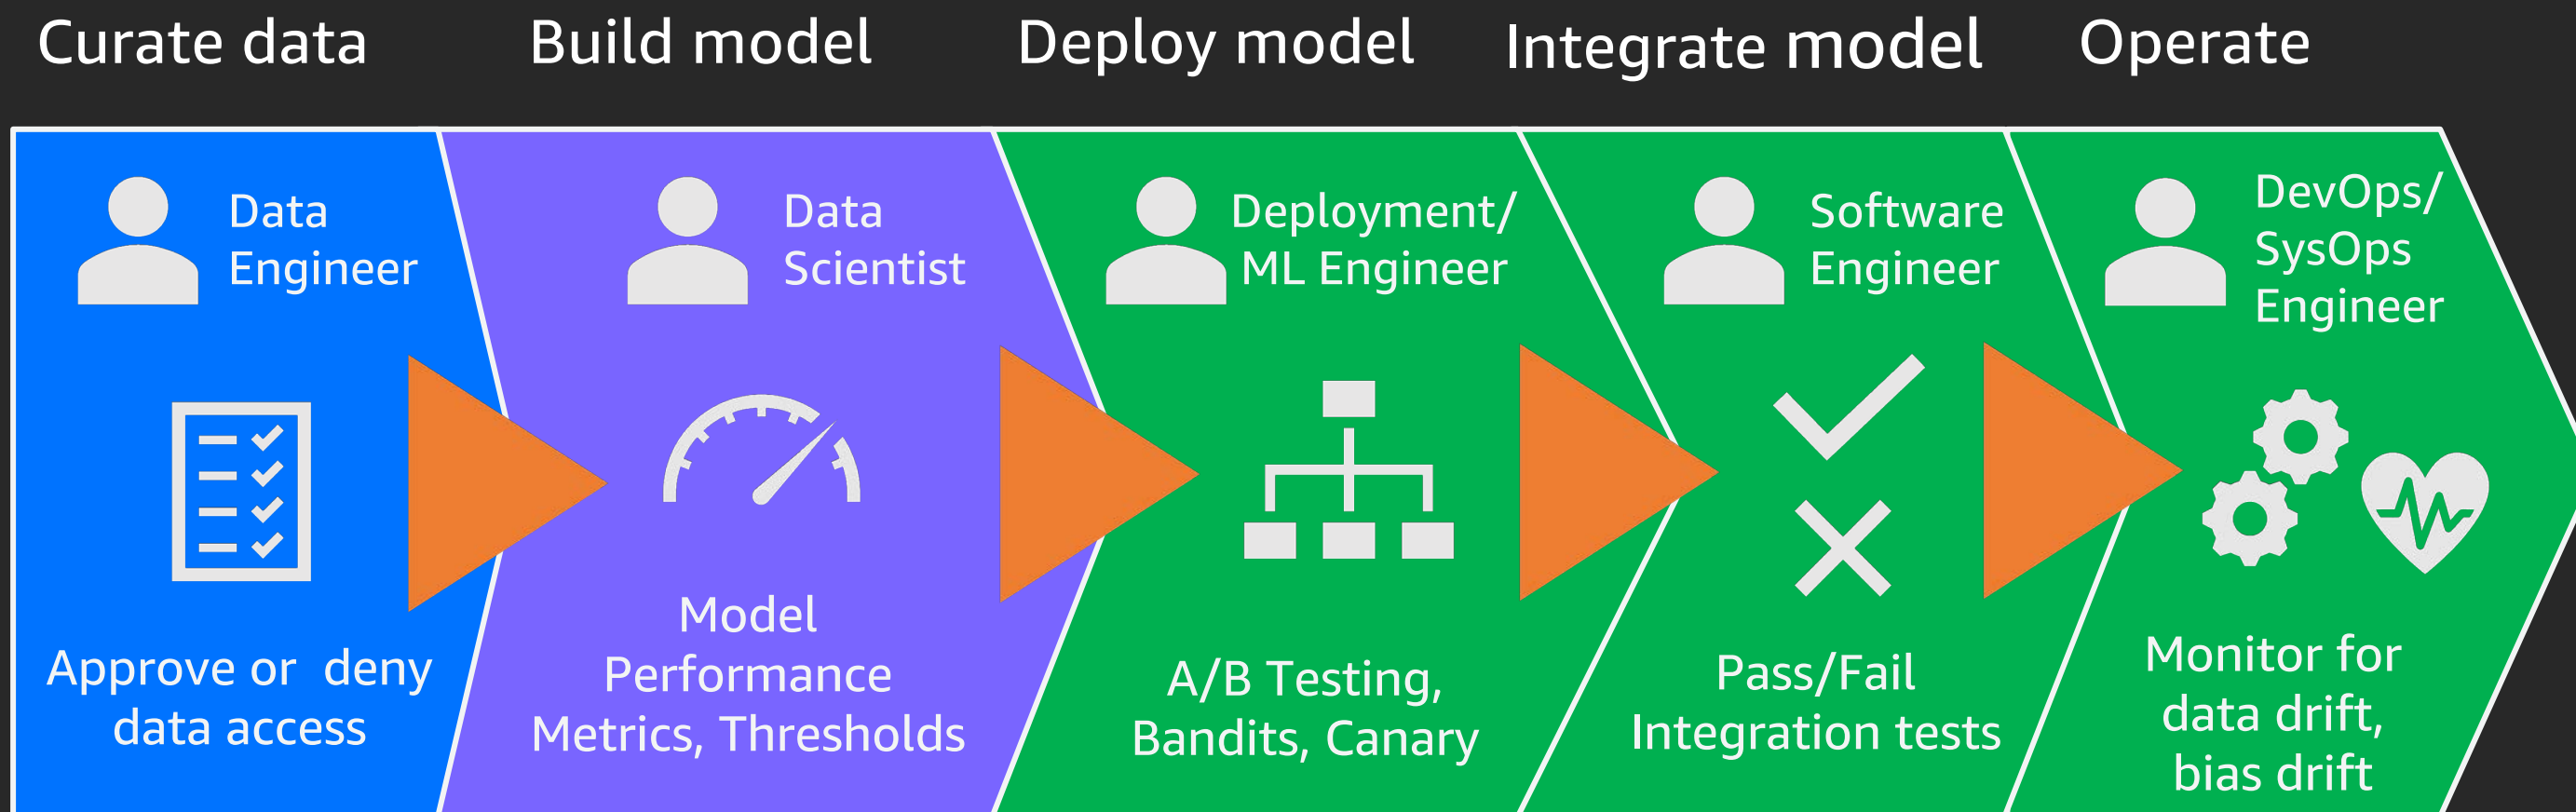

Demo

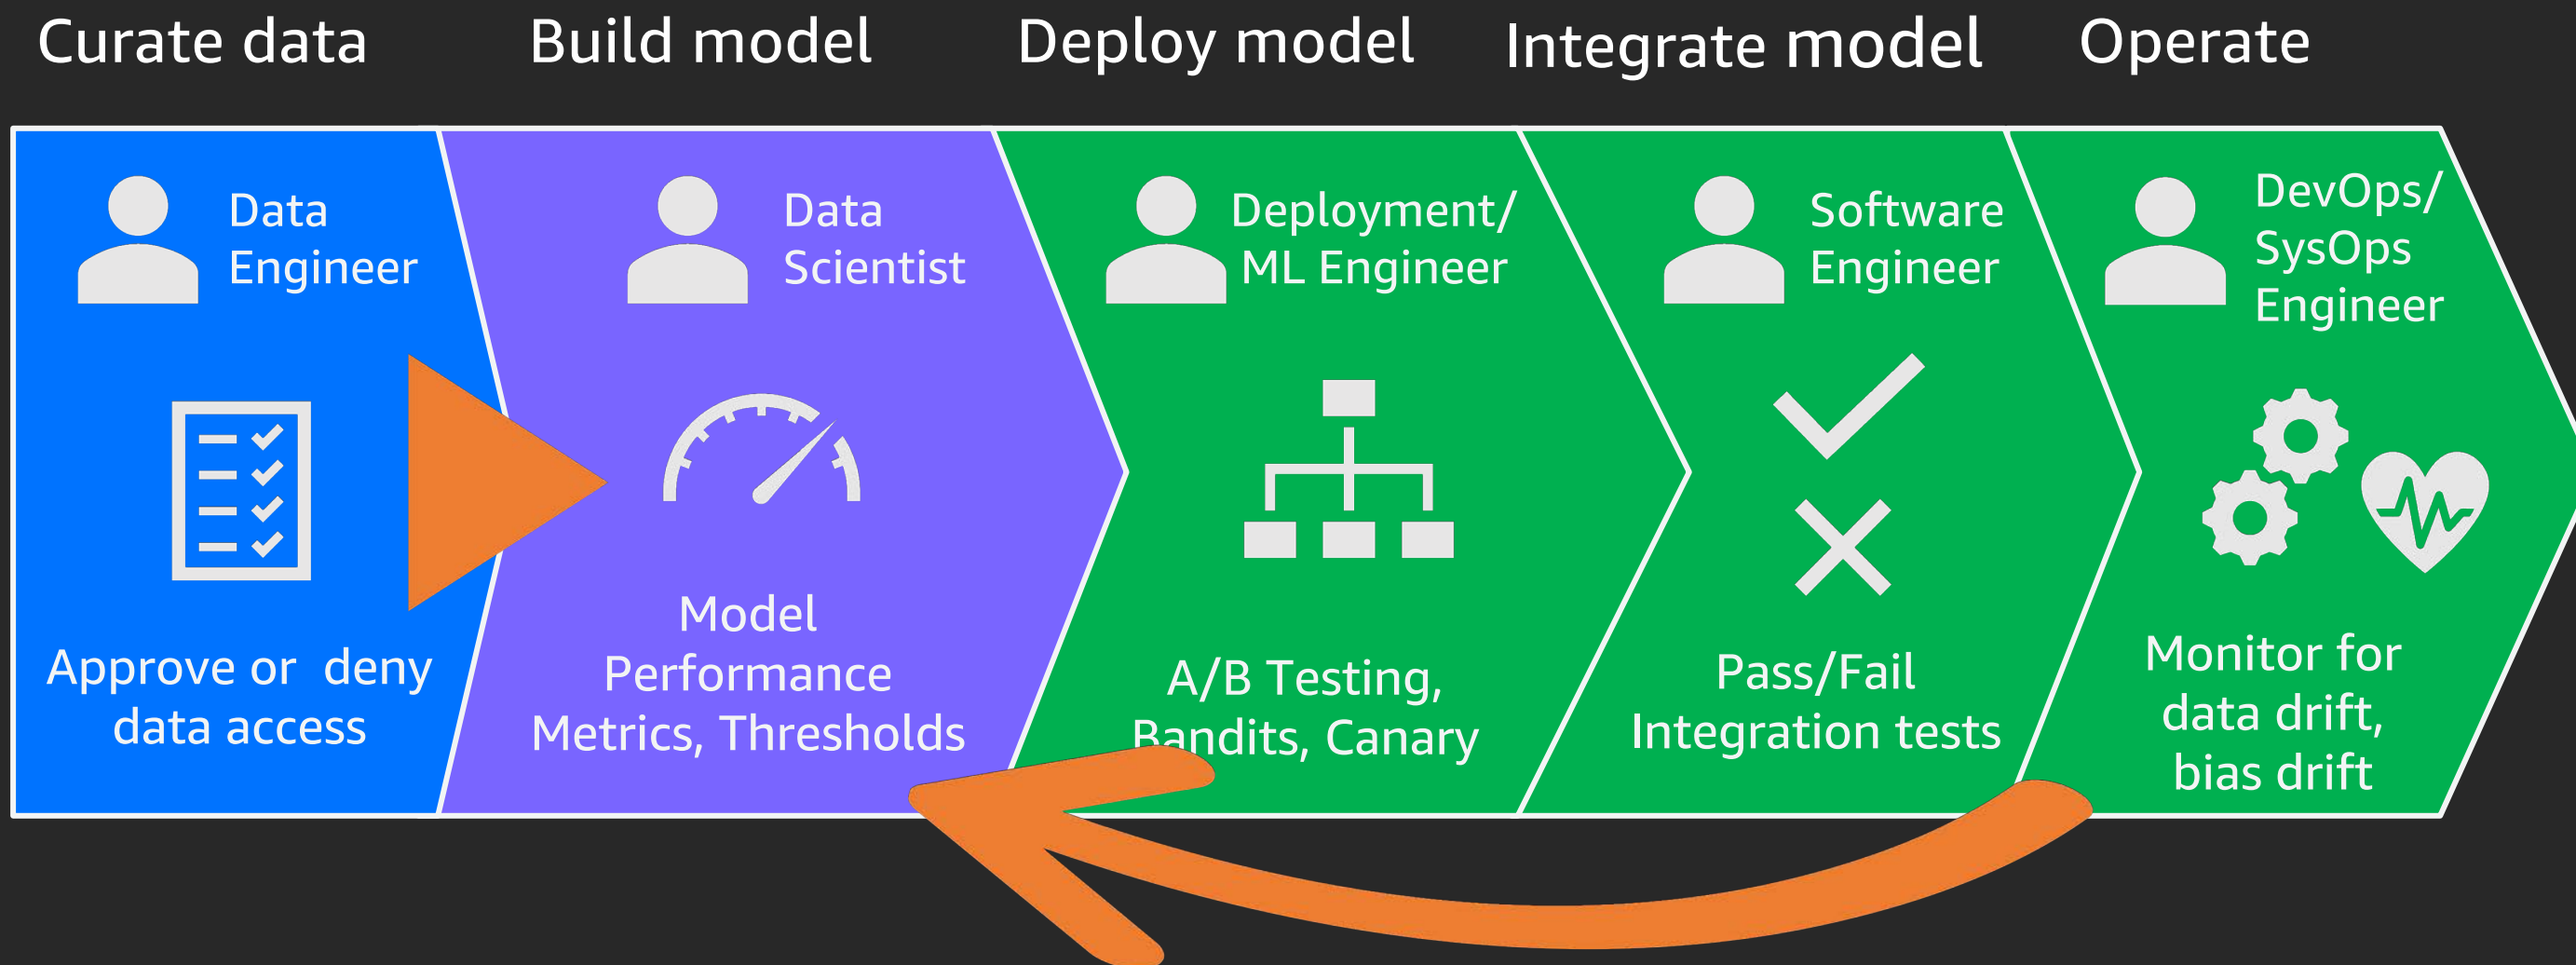

Build a model training pipeline

Phase 2: Automatically run pipelines and include automated quality gates

Phase 2: Automatically run pipelines and include automated quality gates

Demo

Re-run pipeline on code change

Build AI/ML solutions

Production-grade ML platform and systems integration

Security

Reliability

Cost
Optimization

Performance
Efficiency

Operational
Excellence
