

# Weaviate

## Introduction @Conf42

Learn how Weaviate can help with your unstructured data problems

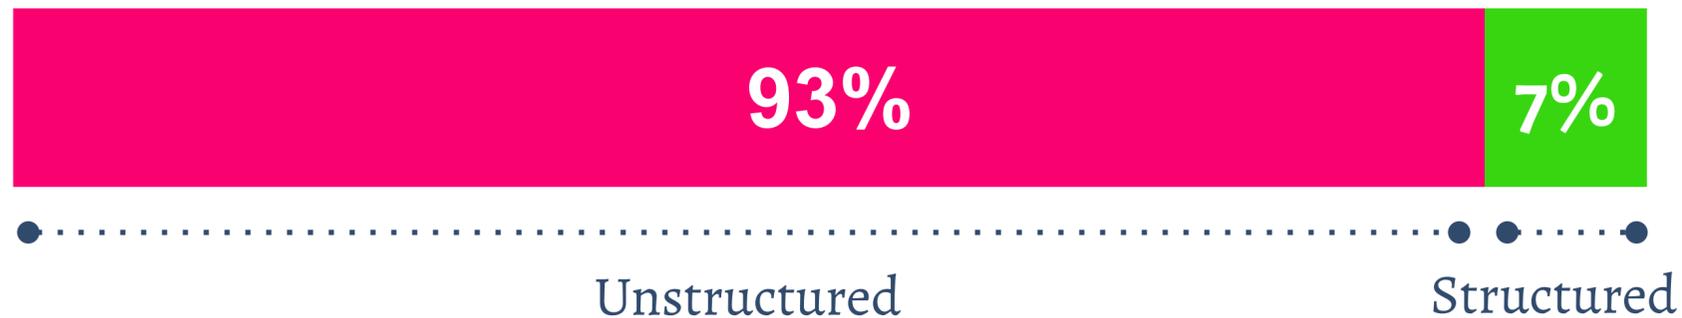

---

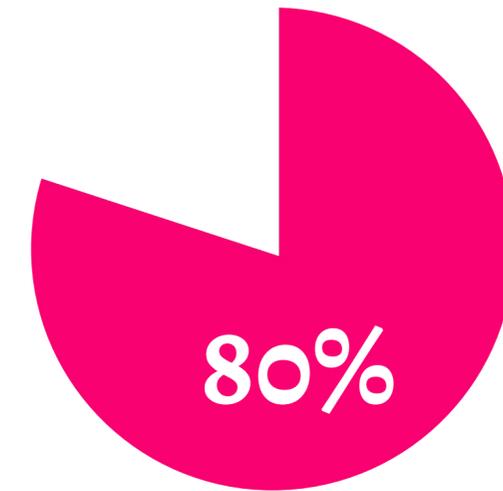

# What's so difficult about **unstructured** data?

# 93% of your data stays unused

Unstructured data makes up about 93% of your data (**Ciklum**).  
About 80% of businesses (**Forbes**) don't know how to leverage it.

Business documents, ERP line items, social media posts, legal documents, emails, images, chat messages, publications, invoices help desk tickets, cyber security analysis, webpages, medical records, human input CRM data, etc.

Your data analysts spend 80% of their time (**HBR**) preparing data to answer business questions.

# What is so difficult about **unstructured** data?

```
{ "data": [{  
  "Wine": "Covey Run 2005 Chardonnay",  
  "Description": "... good with fish ..."  
}]}
```

"Wine for seafood"

No products found ...

*Traditional search engine*

"Wine for seafood"

Covey Run 2005  
Chardonnay

*Vector search engine*

# What is vector search?

Google is a vector search engine too!

Thanks to this, you can use Google Search to find answer in a vast amount of webpages. But did you know that it is estimated that Google only indexes about 0.004% of unstructured data? That's because companies like yours have the rest! What if you could use similar search technology for your data in a reliable and secure way?

What color of wine is Chardonnay?

All Images Shopping News Videos More Settings Tools

About 12.800.000 results (0,81 seconds)

Chardonnay / Wine color

White Wine

And it answers **fast!**

The question is very **abstract.**

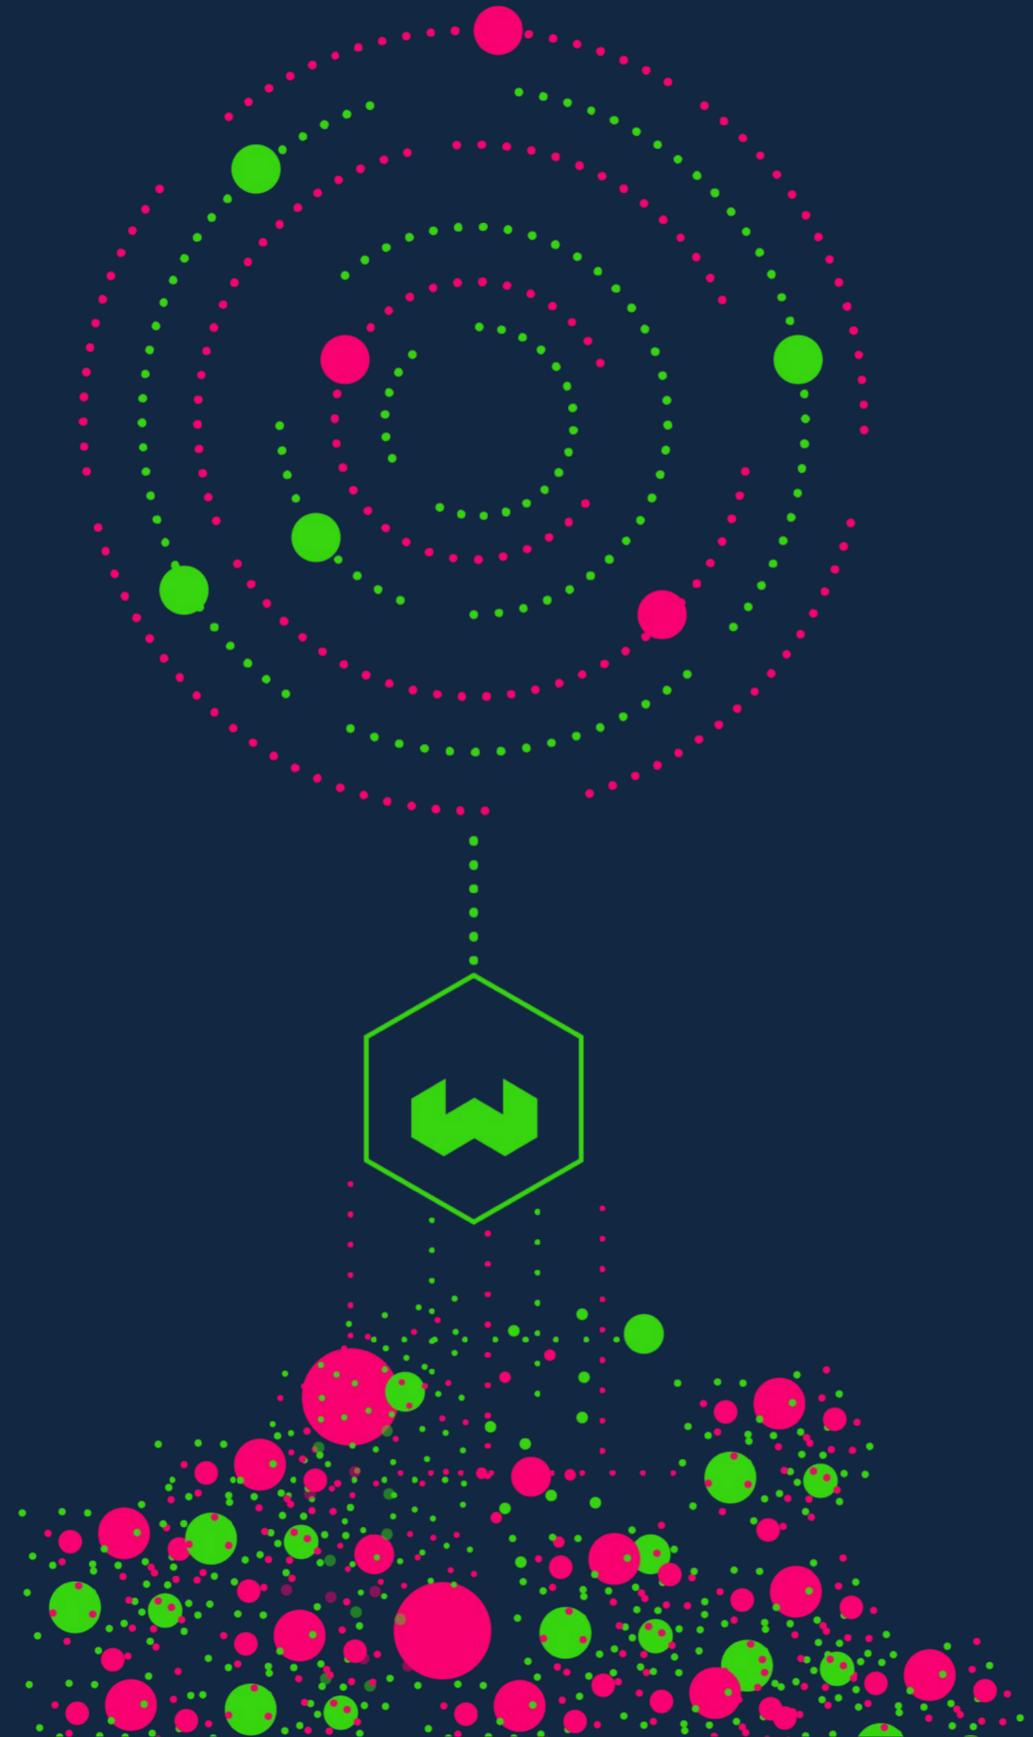

**Google** is good at working with unstructured data on the public web (which is  $< 0.01\%$  of data available)

---

What if you could do the same  
with your data in a **simple and  
secure way?**

**Weaviate puts the 93%  
of data to work.**

**Weaviate is a database based on  
machine learning, thanks to its  
easy to use API's that run in the  
cloud or on premise...**

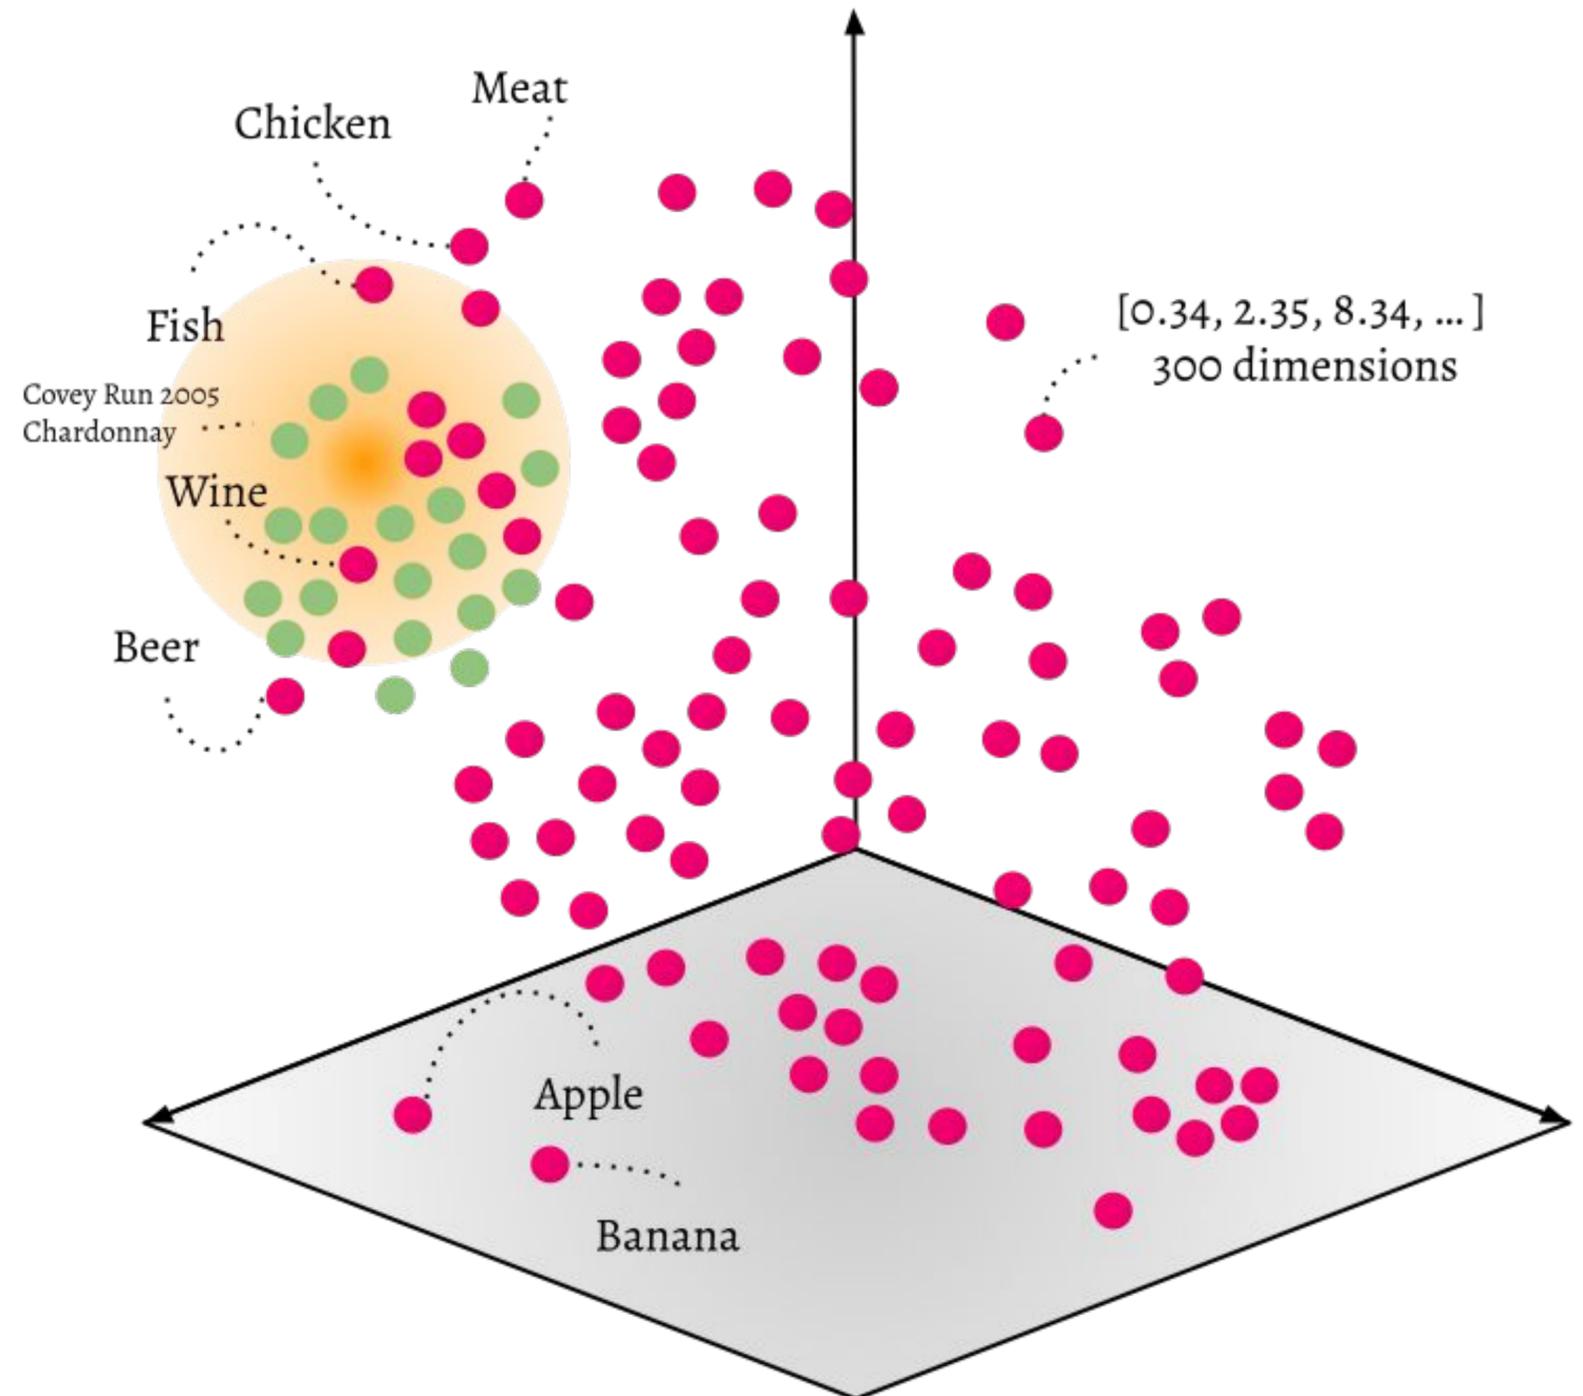

---

**Weaviate** is a cloud-native, modular,  
real-time **vector search engine**,  
built to scale your machine learning models

# What is vector search?

Weaviate is a *vector search engine*

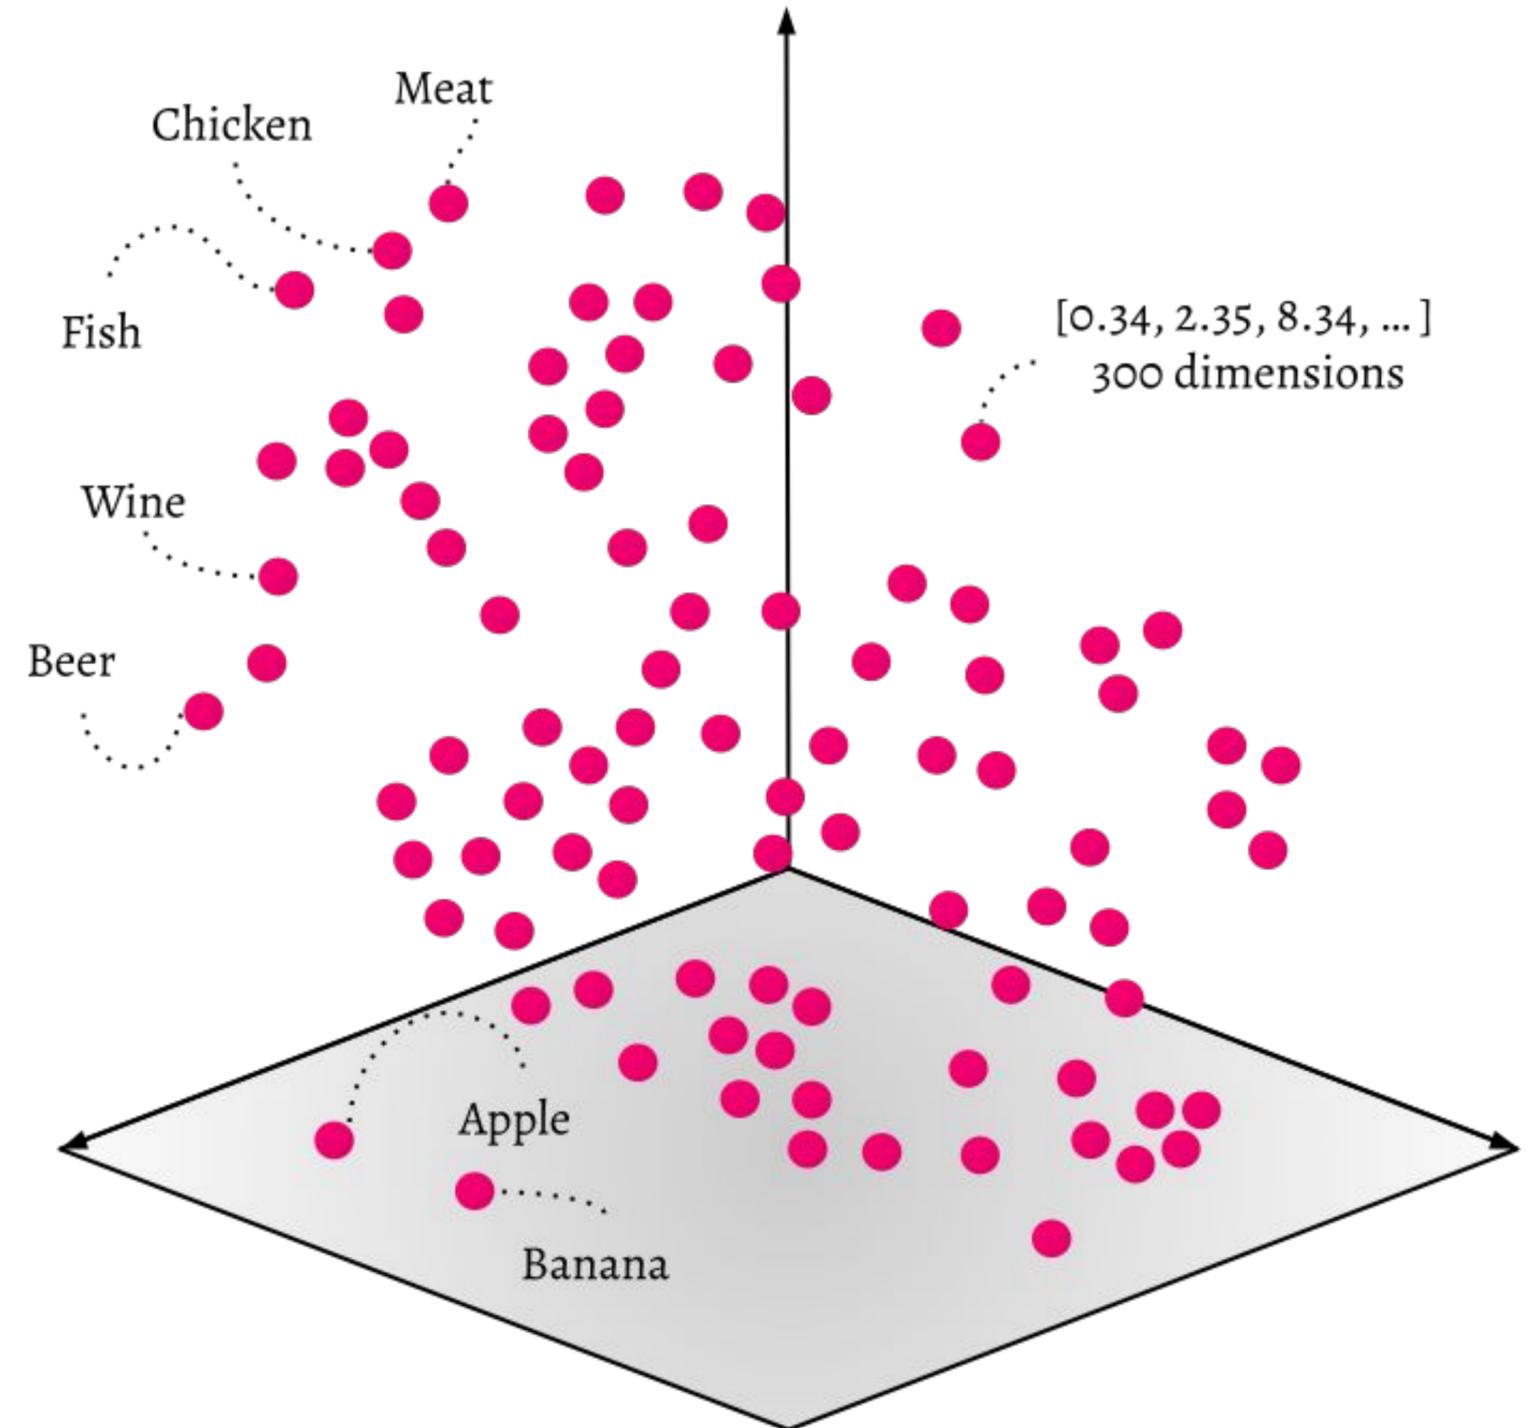

Instead of just storing raw data like traditional databases do, Weaviate leverages the power of machine learning (ML) models to *vectorize* the data. What this means, is that the ML-models try to understand your data while storing it. This allows Weaviate to search, discover and classify similar results in your dataset. Simply put, Weaviate is a database that understands your data.

# What is vector search?

## 1. Weaviate Machine Learning Modules

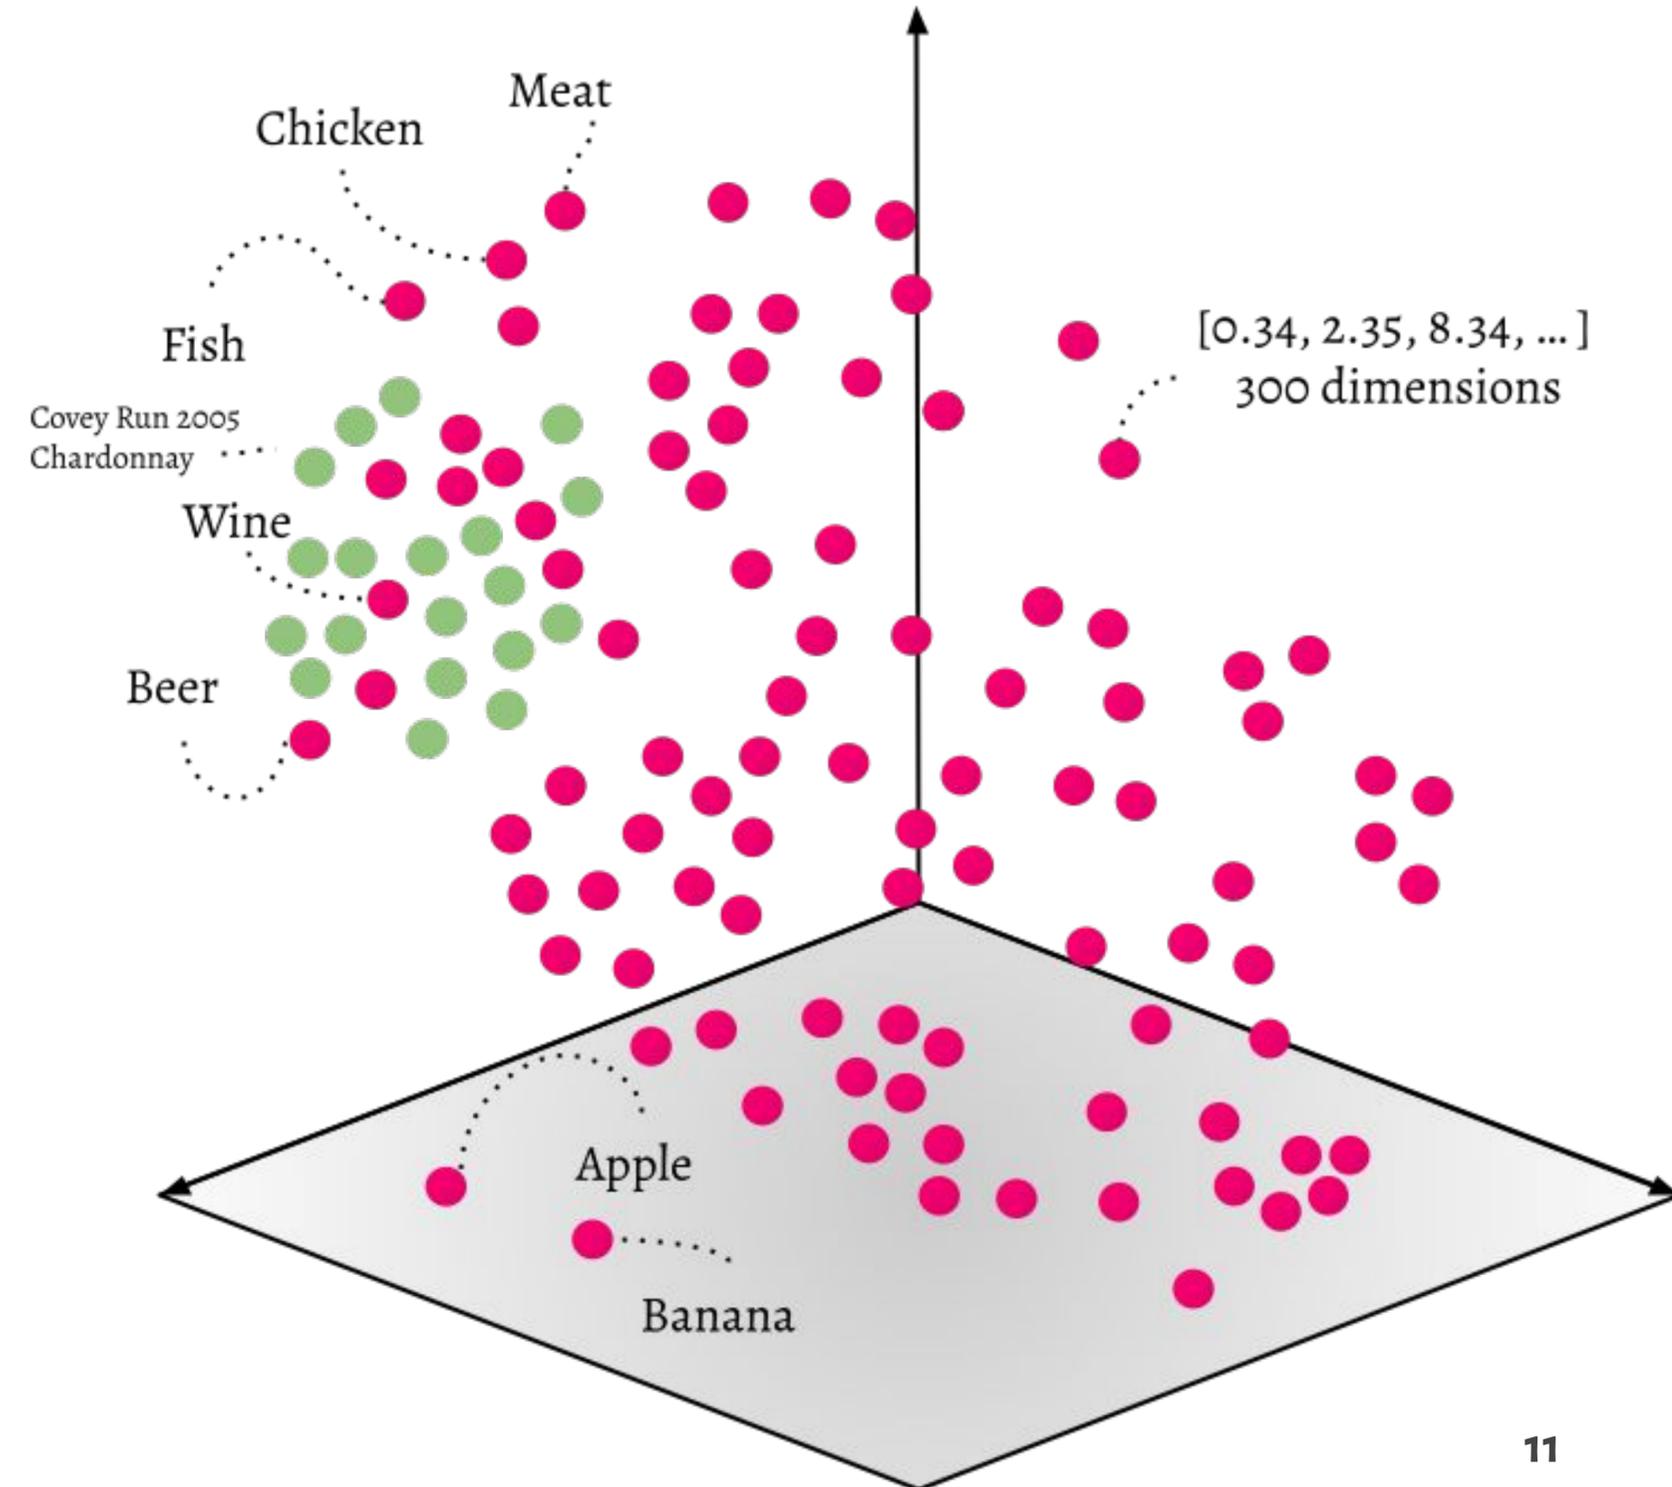

- E.g. BERT NLP module
- This language model can represent all words and concepts in a hyperspace.

# What is vector search?

## 2. Automatically vectorize and index your data

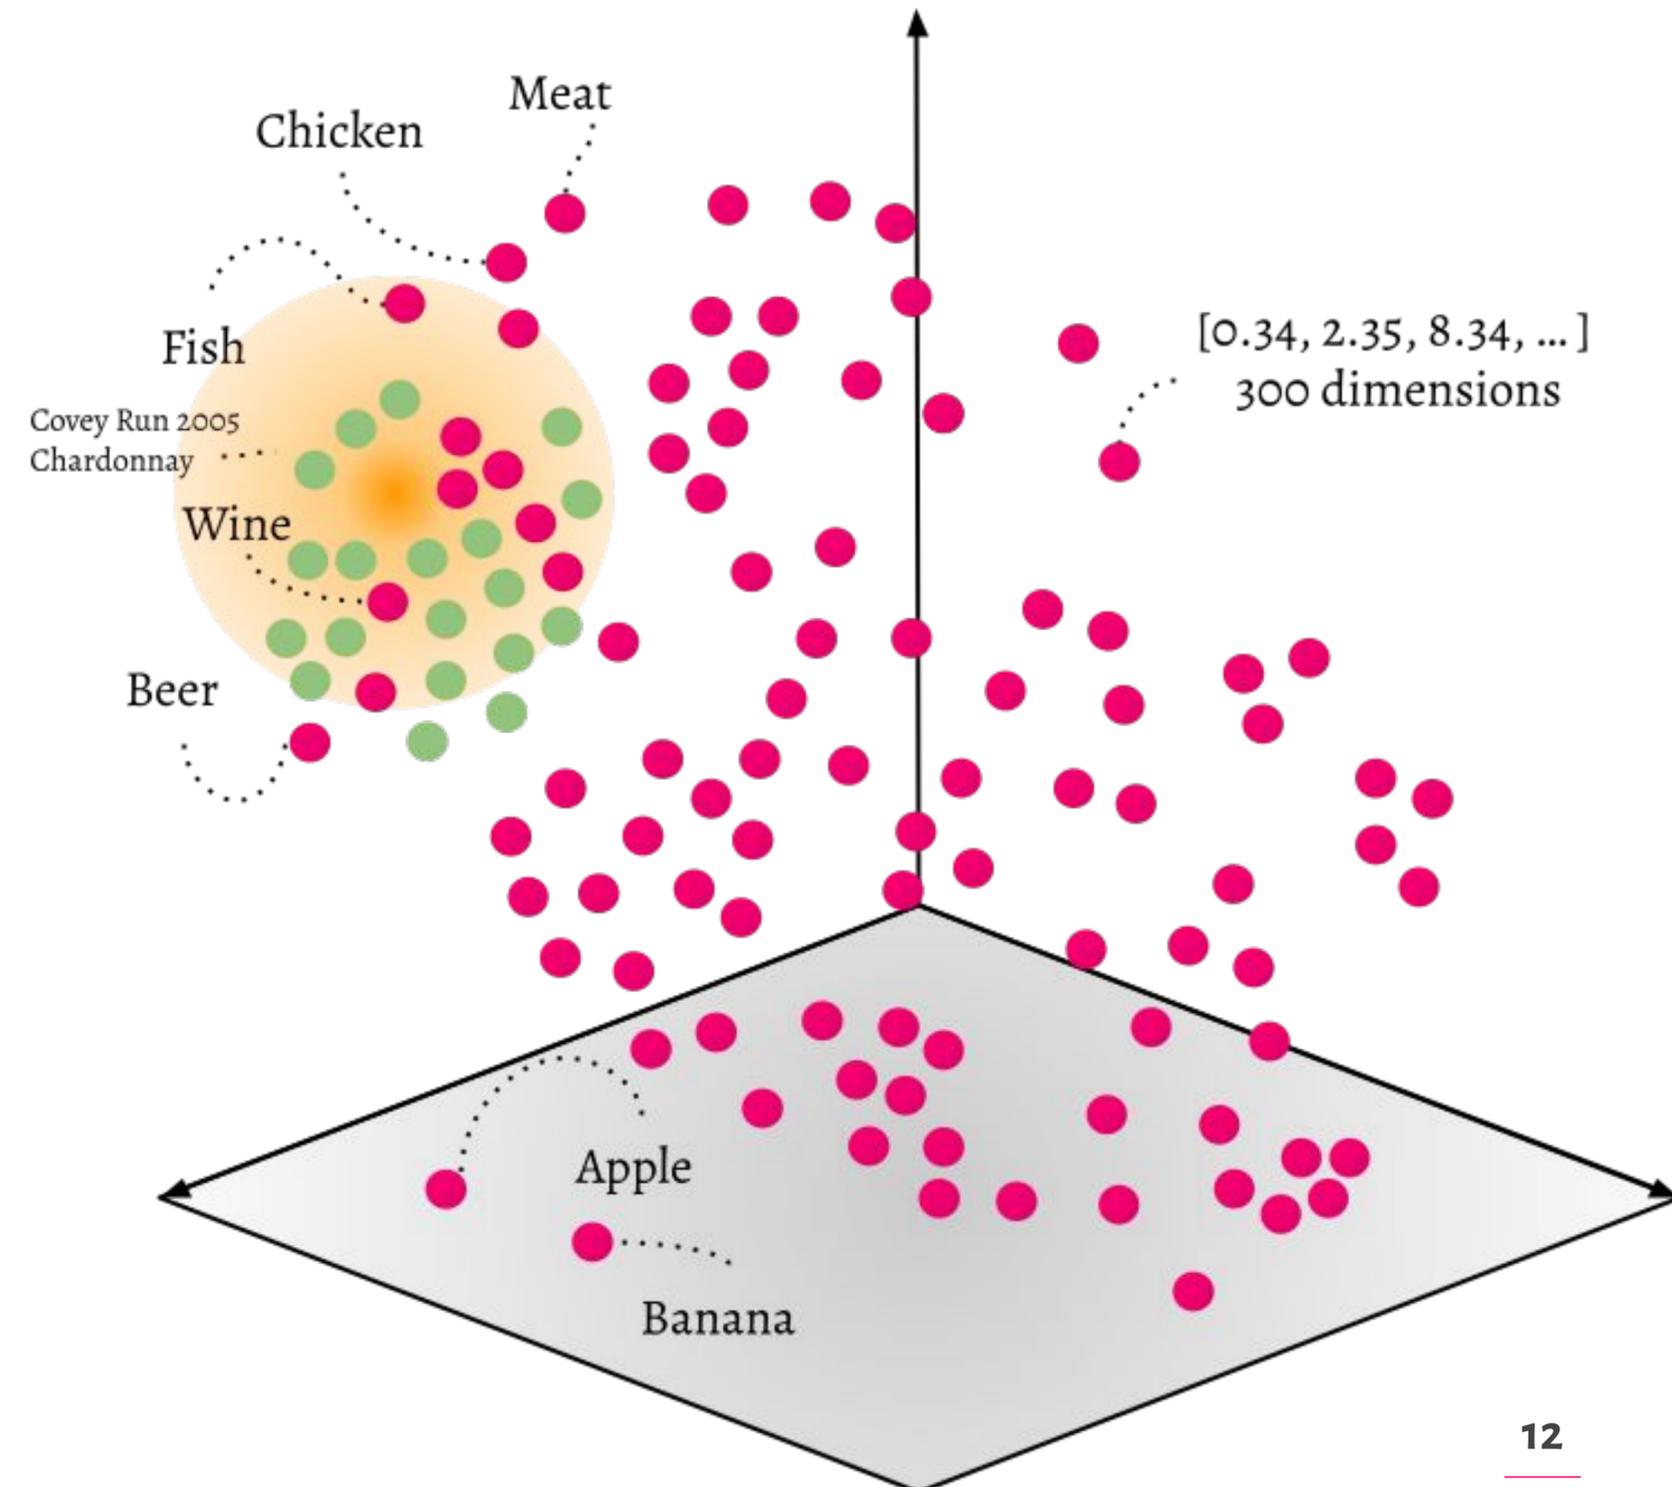

- Weaviate *understands* your data
- When you import data: Weaviate looks at the language in your data object
- E.g. a *Chardonnay* is closely related to *Wine*, *White* and the *food* it fits with

# What is vector search?

## 3. Search query

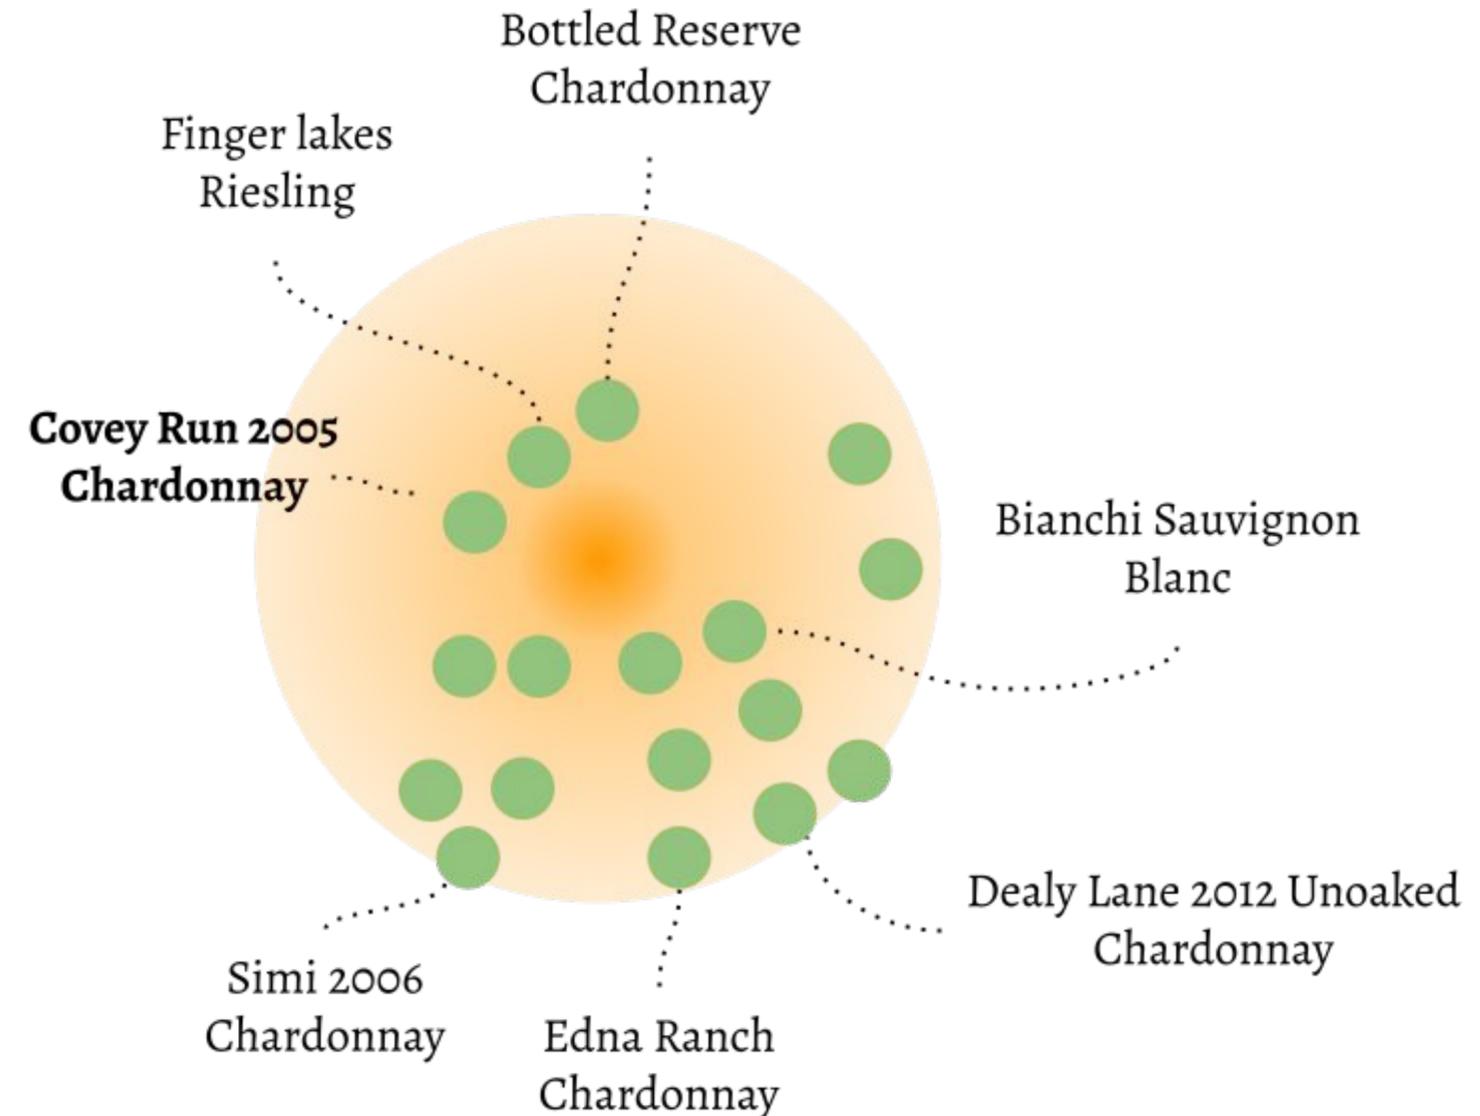

- Your search queries in natural language will also be vectorized and understood by the machine learning module of Weaviate
- It is places close to the words and data object that are semantically related to the query
- E.g. *"Wine that fits with a seafood dish"*

# What is vector search?

## 4. Results

- The data objects that are closest to the search query are retrieved from the dataset

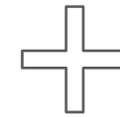

# What is vector search?

Pretrained ML model

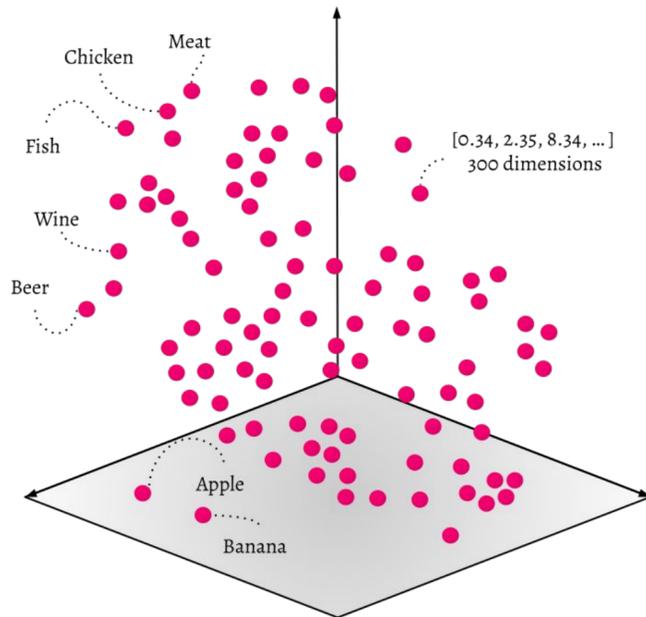

Your own data

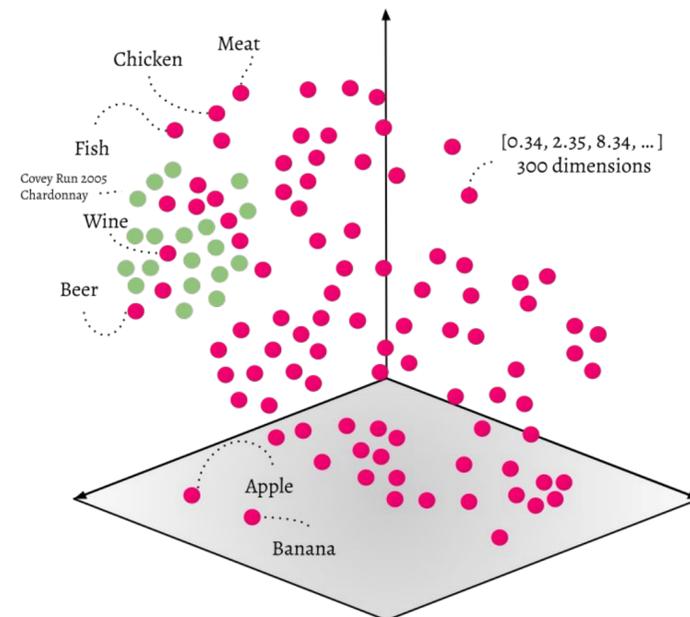

Your search query

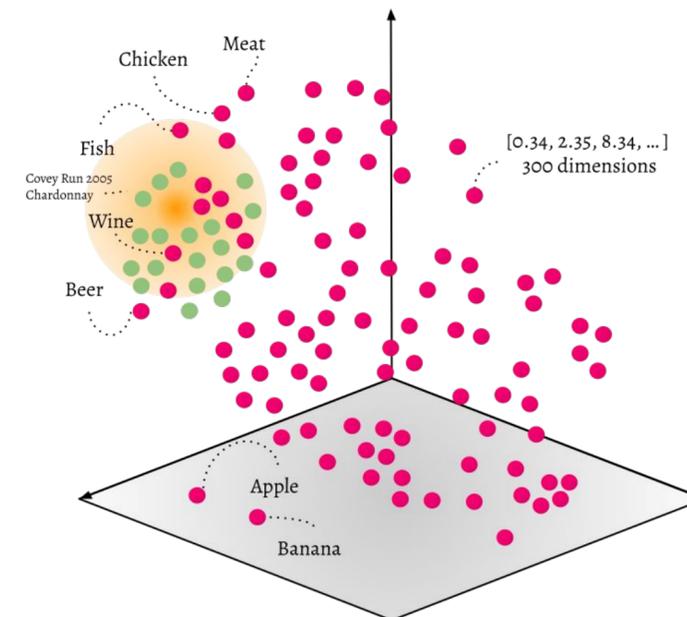

Results

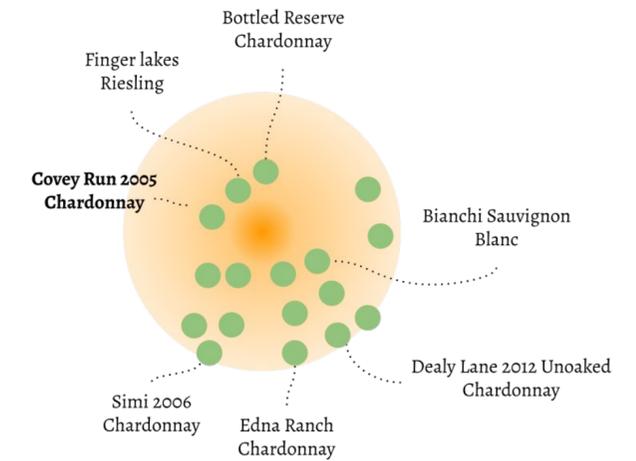

(e.g. NLP)

(e.g. Wines)

(e.g. Wine for seafood)

(e.g. Chardonnay)

It allows you to do the following with any type of unstructured data:

## Search

Weaviate is able to search through your data like Google allows you to search over the web

## Discover

Weaviate can answer questions based on your data

## Classify

Weaviate can classify data from any data source

## Predict

Weaviate can recommend relations in your data
