

Access Is The New Breach: Why Observability Must Start With Identity

Cynthia Akiotu
Cybersecurity Specialist

The Blind Spot in Today's Observability

Traditional Observability

CPU

Memory

Logs

Network
latency

Uptime

Identity Context

User

Role/Permission

Accessed Resource

Access Pattern

Anomaly

Identity: The Real Attack Surface

Every identity human or machine is a potential entry point.

The visibility gap between IAM and observability tools

Barriers to Identity-Aware Observability

**COMPLEX
INFRASTRUCTURE**

DATA SILOS

COST

**CLOUD
VENDOR LIMITS**

So how do we observe access before it becomes a breach?

 Correlate identity with system events

 Audit permissions in real-time

 Detect insider threats

 Align with Zero Trust

 Ensure compliance

Let's Rethink Observability

Access isn't a checkbox. It's an attack surface.

Observability without access is just security theatre.
