

# Code Review

Best Practices, Tips or How To Not Drive Your Colleagues Into Depression With Your Comments

What is code review?

# What is code review?

- Review of code written by other colleagues!

```
50     testImplementation("org.springframework.security:spring-security-test")
51     testImplementation("org.springframework.kafka:spring-kafka-test")
52     implementation("com.google.protobuf:protobuf-java:3.6.1")
53 +   detekt("io.gitlab.arturbosch.detekt:detekt-cli:1.19.0-RC1")
54 +   detekt("org.jetbrains.kotlin:kotlin-compiler-embeddable:1.6.0-RC")
```

Why don't we extract version to properties file?

Why do we need it?

# Why do we need it?

- More eyes on code = more chances to catch potential bugs / privacy and security issues
- Not catching those on time may result in potential production downtime, regulator problems or ruined customer trust

# Why do we need it?

- Code review may mean sharing best practices within project or even company
- Such knowledge sharing helps developers know the code styles and even progress professionally

# Why do we need it?

- Code review may stop the unintended workflows
- It can act as a security layer protecting production from unverified changes

# Best practices

# Best practices

- For a detailed review, check out the author's branch on your local machine and examine each modified file individually.
- Your code editor can help identify syntax errors, and file connections are easier to comprehend when viewed locally.

# Best practices

- Sometimes, it makes sense to review just syntax and pick obvious bugs without getting into the whole business logic.
- Do a deep review if the author specifically asks for it, just make sure the author is aware you are reviewing syntax only.

# Best practices

- Very important: adapt your style!

# Best practices

- Very important: adapt your style!

More junior / recent / sensitive person

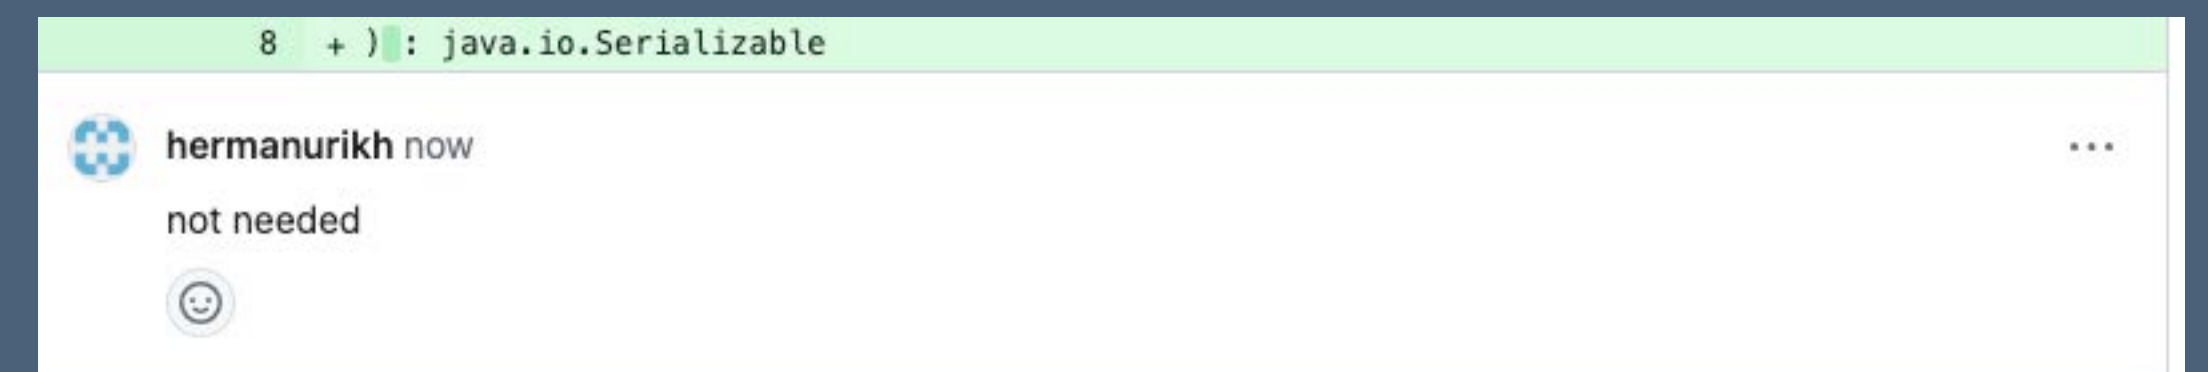

# Best practices

- Very important: adapt your style!

More junior / recent / sensitive person

More senior / experienced / bulletproof person

# Best practices

- Beware of emotional damage
  - Too many comments can be overwhelming even for seasoned devs (I have 10+ years of experience and still can get my ego hurt)
  - Try keeping only most significant ones and moving the rest offline

# Best practices

- Encourage when you like something

```
63 + }  
64 +  
65 + private fun Event.Builder.setTimestampTo(param: Long?): Event.Builder {
```

# Best practices

- Don't argue back and forth in comments
  - People tend to get protective and get the feeling of being publicly attacked
  - Just move the conversation offline / to private chat

Thank you!

And happy coding :)
