

# Reliable monitoring and alerts

SETTING UP YOUR CLOUD FOR SUCCESS

ISRAEL HERINGER

**CONF42**

# About me

- Family
- Brazilians living in the UK
- Games & Travelling
- Software Engineer @ Meta

# Outline

- ▶ Why?
- ▶ Metrics
- ▶ Dashboards
- ▶ Alerts
- ▶ Learning from failures

# Why?

- ▶ Are the systems up right now?
- ▶ Are the metrics stable?
  - ▶ Or keeping the expected trends?
- ▶ Can I sleep in peace?

# Metrics

WHAT DO WE WANT TO MONITOR?

# Metrics

- ▶ Business
  - ▶ KPIs
  - ▶ Goals
  - ▶ User behaviour
- ▶ Technical
  - ▶ Response time
  - ▶ Error rate
  - ▶ Machine constraints (CPU, Memory, IO, ...)
  - ▶ ...
  - ▶ (We'll focus our examples in the technical side)

# Dashboards

ALL YOU NEED TO KNOW AT A GLANCE

# Dashboards

- ▶ Visual representation
- ▶ Key metrics, indicators and trends
- ▶ Insights into the current state
- ▶ Continuous monitoring and analysis
- ▶ Usually, over a time period
  - ▶ Past X hours/days/weeks

Demotron Rotate | 17 | 19

Since 30 minutes ago (PDT)

- Summary
- Monitor
  - Distributed tracing
  - Service map
  - Dependencies
  - Transactions
  - Databases
  - External services
  - Ruby VMs
  - Kubernetes
- Triage
  - Errors inbox
  - Logs
  - Security
- Events
  - Errors
  - Issues & Activity
  - Deployments Preview
  - Deployments
  - Thread profiler
- Reports
  - SLA

### Transactions

5 slowest transactions (by total time)

Transaction name	Slowest trace	Error rate	Average duration

### Related data

From the last 24 hours

Error logs: 4 ▼ 20% | Error traces: 4 ▼ 20%

### Activity stream

Filters

- Critical violation opened** 12:12am  
Order-Composer  
Apdex < 0.9 for at least 20 minutes on 'Order-Composer'  
Count: 1
- Warning violation opened** 12:02am  
Order-Composer  
Apdex < 0.7 for at least 10 minutes on 'Order-Composer'  
Count: 1
- Critical violation opened** 11:53pm Oct 1, 2022  
Order-Composer  
Apdex < 0.9 for at least 20 minutes on 'Order-Composer'  
Count: 1

Period selection

# Useful visualizations

12

- ▶ Time series: Display trends over time
  - ▶ Spikes and seasonality
  - ▶ Example: Error rate over time
- ▶ Stacked area charts: Cumulative contribution to a total value over time
  - ▶ Example: % of users per platform
- ▶ And many others
  - ▶ Bar Charts, Pie Charts, Heat Maps, Scatter Plots, Gauge Charts, Histograms, Waterfall charts
  - ▶ But remember: We need to know how to read them

# Intuitive dashboards

13

- ▶ Plot useful guidelines
  - ▶ Expected values
  - ▶ Soft limits
- ▶ Handful filters
- ▶ Quick access to debug tools
  - ▶ Error rate up?
  - ▶ Which errors?
  - ▶ Show me the stack trace!
- ▶ Not too overwhelming

# Alerts

WE ALL DESERVE PEACE OF MIND

# Alerts

15

- ▶ Automated notifications
- ▶ Observe desired data and metrics
- ▶ Predefined conditions or thresholds
- ▶ Prompt immediate attention
- ▶ Targeted to specific individuals or teams

# Alerts for peace of mind

16

- ▶ Most critical metrics
- ▶ Different levels of severity
  - ▶ Different tags and alerting patterns
- ▶ Early trends vs late downtime
  - ▶ DB storage will be full in X days
- ▶ Clear and actionable
  - ▶ What we should do when this alert fires?
  - ▶ Is there an escalation path?

# Learning from failures

WHY? WHY? WHY? WHY? WHY?

# Problems happen

# Learning from failures

19

- ▶ Why did this incident happen?
  - ▶ Non-cloud example: Server shutdown
  - ▶ Why? Why? Why? Why? Why?
  - ▶ Finding the real root cause
- ▶ What could have prevented it?
  - ▶ Alert: System down vs dangerous trends
- ▶ Were we caught off guard?
  - ▶ How can we detect this earlier
- ▶ Any missing dashboard or alert?

# Wrapping up

- ▶ Metrics
- ▶ Dashboards
- ▶ Alerts
- ▶ Learning from failures

# Thank you
